Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX Thrombopoietin receptor-binding/activating peptide(s) and peptide
PT mimetic(s) - useful in treatment of haematological disorders, esp.
PT thrombocytopenia resulting from chemotherapy, etc.
XX Claim 18; Page 89; 106pp; English.
PS The present sequence is a compound which binds to thrombopoietin (TPO)
XX receptor (TR). It has a molecular weight of < 8000 Da, and a binding
CC affinity to TR as expressed by an IC50 of no more than about 100 mum. The
CC compound (especially if modified, see features table) can be used for
CC treating patients suffering from haematological disorders and
CC thrombocytopenia resulting from chemotherapy, radiation therapy or bone
CC marrow transfusions. The peptide may also be used to maintain the
CC proliferation and growth of TPO-dependent cell lines and for use in
CC biological research, for detecting TPO receptors on living cells

PT Peptides and peptide mimetics which bind to and activate the
PT thrombopoietin receptor - useful in treatment of haematological
PT disorders, esp. thrombocytopenia resulting from chemotherapy, etc.
XX
PS Example 9; Page 77; 106pp; English.
XX
CC The present peptide, which binds the thrombopoietin receptor (TR), can be
CC used to treat disorders which are susceptible to treatment with a
CC thrombopoietin agonist, preferably haematological disorders and
CC thrombocytopaenia resulting from chemotherapy, radiation therapy or bone
CC marrow transfusions. It can also be used diagnostically, e.g. to
CC investigate the mechanism of thrombopoietin signal transduction and
CC receptor activation, or to maintain the proliferation and growth of
CC thrombopoietin dependent cell lines

PS Claim 24; Page 90; 113pp; English.
XX
CC The invention relates to a novel pharmacologically active peptide
CC conjugate having a reduced tendency towards enzymatic cleavage comprises
CC X and Z, where: (a) X is a pharmacologically active peptide sequence; and
CC (b) Z is a stabilising peptide sequence of 4-20 amino acid units
CC covalently bound to X, where each amino acid unit in the stabilizing
CC peptide sequence, Z being selected from Ala, Leu, Ser, Thr, Tyr, Asn,
CC Gln, Asp, Glu, Lys, Arg, His, Met, Orn, and amino acid units of formula -
CC NH-C(R1)(R2)-C(=O)- (I), where: R1 and R2 are H, 1-6C alkyl, phenyl, and
CC phenyl-methyl, where 1-6C-alkyl is optionally substituted with 1 -3
CC substituents selected from halogen, hydroxy, amino, cyano, nitro,
CC sulfono, and carboxy, and phenyl and phenyl-methyl are optionally
CC substituted with 1-3 substituents selected from 1-6C-alkyl, 2-6C-alkenyl,
CC halogen, hydroxy, amino, cyano, nitro, sulfono, and carboxy, or R 1 and R
CC 2 together with the C atom to which they are bound form a cyclopentyl,
CC cyclohexyl or cycloheptyl ring, e.g. 2,4-diaminobutanoic acid and 2,3-
CC diaminopropanoic acid; the ratio between the half-life of the peptide
CC conjugate and the half-life of the corresponding active peptide sequence,
CC X, when treated with carboxypeptidase A or leucine aminopeptidase in
CC about 50 mM phosphate buffer solution at about pH 7.4 and about 37 deg C
CC or in serum or plasma is at least about 2 (preferably at least about 10),
CC or when the pharmacologically active peptide X is not orally absorbed,
CC the conjugate is adsorbed, or a salt, with the proviso that the
CC pharmacologically active peptide conjugate is not selected from sequences
CC (ADI24837)-(ADI24841). The peptide conjugates can be used for treating
CC e.g. pain, HIV, cancer, diabetes, incontinence, hypertension, amnesia,
CC Alzheimer's disease, fever, depression, sex hormone regulation, eating
CC disorders, schizophrenia, osteoporosis or insomnia. They can also be used
CC for treating e.g. CNS disorders and as contraceptives. The conjugated
CC peptides are less susceptible to degradation by proteases compared to the
CC corresponding free pharmacologically active peptides. This sequence
CC represents a pharmacologically active peptide as the X part of the

CC peptide of the invention.

XX Thrombopoietic peptides which activate mpl receptors and increase the
PT production of platelets or platelet precursors, useful for treatment of
PT diseases which involve thrombocytopenia.
XX
PS Claim 7; Page 60; 91pp; English.
XX
CC A compound which binds to an mpl receptor comprising a thrombopoietin
CC mimetic peptide (TMP) dimer joined by a linker [TMP₁-(L₁)_nTMP₂], is
CC new. TMP₁ and TMP₂ are amino acid sequences varying from at least 10 to
CC 14 residues in length comprising X₂-X₁⁰, X₂-X₁¹, X₂-X₁², X₂-
CC X₁³, X₂-X₁⁴, X₁-X₁⁰, X₁-X₁¹, X₁-X₁², X₁-X₁³, and X₁-
CC X₁⁴. X₁¹ = I, A, V, L, S or R; X₂² = E, D, K or V; X₃ = G or A; X₄ =
CC P; X₅ = T or S; X₆ = L, I, V, A or F; X₇ = R or K; X₈ = Q, N, or E;
CC X₉ = W, Y or F; X₁₀ = L, I, V, A, F, M, or K; X₁₁ = A, I, V, L, F,
CC S, T, K, H, or G; X₁₂ = A, I, V, L, F, G, S, or Q; X₁₃ = R, K, T, V,
CC N, Q or G; X₁₄ = A, I, V, L, F, T, R, E, or G; L₁ = linker comprising
CC 1 to 20 amino acids; and n = 0 or 1. The compounds bind to and activate
CC the c-Mpl receptor which mediates the activity of endogenous
CC thrombopoietin. The TMPs are useful for increasing the production of
CC platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which
CC is useful for treatment of diseases which involve thrombocytopenia, e.g.
CC aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency
CC virus associated ITP, and systemic lupus erythematosus

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 189; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

PT diabetic retinopathy, obesity, sleep disorders and infertility.

XX
PS Claim 39; Page 43; 176pp; English.

CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet

CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

PT A novel immunogen molecule comprising a region in which amino acid
PT residues corresponding to at least a portion of the complementary
PT determining region are replaced or fused with an erythropoietin or
PT thrombopoetin mimetic.

XX
PS Claim 18; Page 6; 113pp; English.

XX
CC The present invention describes an immunoglobulin molecule or its fragment
CC (I) comprising a region where amino acid residues corresponding to at
CC least a portion of the complementary determining region (CDR) are
CC replaced or fused with biologically active peptides e.g. a peptide
CC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic,
CC that is flanked with proline at its carboxy terminus. (I) has
CC antianaemic, haemostatic and nephrotropic activities, and can be used as
CC a stimulator of proliferation, differentiation and maturation of
CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
CC for stimulating proliferation, differentiation or growth of
CC promegakaryocytes or megakaryocytes, where (I) is contacted with
CC promegakaryocytes or megakaryocytes, which results in increased platelet
CC production. (I) with a region where amino acid residues corresponding to
CC a portion of CDR is replaced with an EPO mimetic, or which has one or
CC more of its CDRs fused to an EPO mimetic, is useful for increasing the
CC production of red blood cells, where (I) is contacted with haematopoietic

CC stem cells or their progenitors. (I) is useful for diagnostics or
CC therapeutics, in cell isolation strategies, and for treating patients
CC suffering from deficiency in cell populations caused by disease,
CC disorders or treatments related to the suppression of haematopoiesis.

XX Adenoviral coat protein which permits production of adenoviral vectors

XX that bind and infect host cells not naturally infected by adenovirus,

XX comprises various non-native ligands.

XX Claim 4; Page 45; 45pp; English.

XX The invention relates to adenoviral coat proteins comprising various non-
XX native ligands. The invention provides a method of controlled gene
XX expression utilising selectively replication competence and also a method
XX and a composition for targetting an adenoviral vector. A system
XX comprising a cell having a non-native cell-surface receptor, and a virus
XX having a non-native ligand which binds the non-native cell-surface
XX receptor of the cell is useful for propagating a virus and also for
XX assaying gene function. The system is also useful for isolating a nucleic
XX acid encoding a product comprising a desired property. Further the system
XX is useful for identifying functionally related coding sequences.

XX Adenoviral vector comprising a non-native nucleic acid encoding a
XX therapeutic agent such as anti-tumour agent, preferably tumour necrosis
XX factor and a second non-native nucleic acid encoding an agent that
XX facilitates imaging and a targetting agent is useful for treating an
XX animal. The therapeutic agent can be used to treat cancer of the brain,
XX lung, ovary, breast and prostate. The present sequence is human non-
XX native ligand attached to an adenoviral vector

XX New thrombopoietin synthebodies, useful for stimulating proliferation,
XX growth, or differentiation of hematopoietic cells, for treating or
XX preventing hematopoietic or immune disorders, e.g. thrombocytopenia.

XX Claim 62; Page 71; 97pp; English.

XX The invention discloses a variant of an immunoglobulin (Ig) variable
XX heavy or light chain domain that comprises at least one complementarity
XX determining region (CDR) and framework regions flanking the CDR. The CDR
XX also has added or substituted to it, at least one binding sequence which
XX is heterologous to the CDR and is an antigenic, agonistic sequence from a
XX thrombopoietin (TPO) receptor binding sequence. The antigenic sequence
XX can be a binding sequence heterologous to the CDR, a cytotoxic T-
XX lymphocyte (CTL)-epitope sequence, a T-helper cell sequence, a B-helper
XX cell sequence or a combination of each. The variant or thrombopoietin
XX synthebody, pharmaceutical and vaccine compositions are useful for
XX stimulating proliferation, growth or differentiation of haematopoietic
XX cells, particularly platelet progenitor cells. The variants are also
XX useful for treating or preventing haematopoietic or immune disorders
XX resulting from chemotherapy, radiation therapy, or bone marrow
XX transfusions (e.g. thrombocytopenia or disseminated intravascular
XX coagulation). Compositions comprising the synthebodies can be used for
XX the mobilisation, amplification and ex vivo expansion of stem cells and
XX committed precursor cells for autologous and allogeneic transplantation
XX as well as for the expansion of stem cells for gene therapy. They are
XX also useful as diagnostic or analytical reagents for studying the

CC function of thrombopoietin and its receptor in vivo or in vitro. The
CC sequence presented is the TPO receptor (MPL) agonist peptide, AF12505

XX Antibody targeting compound useful e.g. for diagnostic immunoassays and
PT treating microbial diseases comprises targeting or biological agent
PT covalently linked to combining site of the antibody.
XX
PS Example 7; Page 62; 56pp; English.
XX
XX The present sequence is that of thrombopoietin (TPO) mimetic peptide
CC AF12505, which mimics the activity of recombinant TPO. The invention
CC provides antibody targeting compounds that are used to reprogram the
CC specificity of an antibody. The antibody targeting compound is linked to
CC the combining site of the antibody, such that the modified antibody takes
CC on the binding specificity of the targeting agent. In an example from the
CC invention, a TPO receptor targeting antibody compound was prepared by
CC covalently linking peptide ABL2505 to aldolase monoclonal antibody 38C2.
CC The TPO receptor targeting antibody compound can be used to treat
CC thrombocytopaenia resulting from chemotherapy and bone marrow
CC transplantation

XX
XX The present invention describes a chimeric retrovirus envelope protein
CC (I) comprising an ecotropic envelope protein and a heterologous short
CC peptide ligand inserted within the ecotropic envelope protein. Also
CC described: (1) a nucleic acid molecule comprising a sequence encoding the
CC recombinant chimeric envelope protein; (2) a vector comprising a nucleic
CC acid sequence encoding the chimeric envelope protein; (3) a recombinant
CC retroviral particle comprising a chimeric envelope protein comprising a
CC heterologous short peptide ligand; (3) altering retroviral tropism; (4)
CC identifying a nucleic acid sequence encoding the chimeric envelope
CC protein that alters viral tropism; (5) delivering a nucleic acid sequence
CC to a cell; and (6) treating cancer. (I) has cytotstatic activity and can
CC be used in gene therapy. The chimeric retrovirus envelope protein is
CC useful for treating cancer, which comprises providing a cancer cell, e.g.
CC human cancer cell and infecting the cancer cell with a virus, e.g.
CC retrovirus comprising the chimeric envelope protein comprising a
CC heterologous short peptide ligand and a therapeutically useful gene, e.g.
CC encoding thymidine kinase. The present sequence represents an
CC erythropoietin receptor/erythropoietin consensus peptide, which is given
CC in the exemplification of the present invention.

DR
XX Novel thrombopoietin mimetic peptides which bind to mpl receptor, and
PT which stimulate the production of platelets and/or the production of
PT platelet precursors, useful for treating thrombocytopenia.
XX
PS Disclosure; SEQ ID NO 1; 126pp; English.
XX
CC The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that
CC binds to the c-mpl (mpl) receptor, and which stimulates the production of
CC platelets and/or the production of platelet precursors, is new. Further
CC disclosed is a composition of matter (II) that binds to an mpl receptor,
CC and a pharmaceutical composition comprising (II) and a carrier. The
CC pharmaceutical composition of the invention is useful for treating
CC thrombocytopaenia in an animal, and for increasing megakaryocytes or
CC platelets in a patient. The TMP of the invention is useful for treating
CC conditions involving a megakaryocyte and/or platelet deficiency, e.g.
CC disease conditions involving thrombocytopaenia such as aplastic anaemia,
CC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia,
CC autoimmune haemolytic anaemia, Hughe's syndrome and lupoid
CC thrombocytopaenia. The TMP of the invention is also useful for
CC maintaining the viability or storage life of platelets and/or
CC megakaryocytes and its derived cells. The compounds demonstrate an
CC improved ability to bind to and/or trigger transmembrane signal through,
CC i.e. activating, the mpl receptor the compounds have superior
CC thrombopoietic activity, i.e. the ability to stimulate, in vivo and in
CC vitro, the production of platelets and/or megakaryocytopenic activity,
CC i.e. the ability to stimulate, in vivo and in vitro, the production of
CC platelet precursors. Further, certain of the compounds also exhibit
CC superior therapeutic properties, such as improved plasma half-life,
CC biological activity and in vivo circulation time. The current sequence
CC represents a TMP of the invention.

PT in the prokaryotic cell.
XX
PS Claim 8; Page 48; 69pp; English.
XX
CC The specification describes a method for obtaining a recombinant fusion
CC protein comprising a scaffold of a C-terminal core protein of C4bp alpha
CC chain, where the recombinant fusion protein is capable of forming
CC multimers in soluble form in a prokaryotic host cell. The method
CC comprises providing a prokaryotic host cell carrying a nucleic acid
CC encoding the recombinant protein operably linked to a promoter functional
CC in the prokaryotic cell, culturing the host cell under conditions where
CC the recombinant protein is expressed, and recovering the recombinant
CC protein where the protein is recovered in multimeric form without
CC performing a scaffold refolding step. The protein is useful for treating
CC systemic lupus erythematosus. The present sequence represents a
CC thrombopoietin agonist peptide, which is used to produce fusion proteins
CC of the invention.

PT Increasing hematopoietic stem cell production in subject, useful in
PT reducing the incidence of delayed primary engraftment, comprises
PT administering a Thrombopoietin mimetic compound e.g., a peptide to a
PT subject.
XX
PS Disclosure; Fig 2; 32pp; English.
XX
CC The invention relates to a method (M1) for increasing haematopoietic stem
CC cell production in a subject which involves administering a
CC Thrombopoietin (TPO) mimetic compound to the subject. Also included is
CC another method (M2) of providing haematopoietic stem cells to a subject
CC which involves administering a TPO mimetic compound to a subject to
CC enhance expansion of a stem cell population within bone marrow and/or
CC mobilize stem cells in peripheral circulation, harvesting one or more of
CC the bone marrow stem cells or the stem cells in the peripheral
CC circulation, and transplanting the harvested stem cells into the subject.
CC A method (M3) is also provided for reducing a time to engraftment
CC following reinfusion of stem cells in a subject, involves administering a
CC TPO mimetic compound to the subject, enhancing the expansion of the stem
CC cell population within bone marrow and/or mobilizing the stem cells in
CC peripheral circulation, harvesting one or more of the bone marrow stem
CC cells or one or more of the stem cells in the peripheral circulation, and
CC transplanting the one or more harvested stem cells into the subject. TPO
CC mimetic compounds are disclosed as peptides, including cyclic or modified
CC peptides. (M1) is useful for increasing haematopoietic stem cell
CC production in a subject e.g., human. (M3) is useful for reducing time to
CC engraftment following reinfusion of stem cells, reducing the incidence of
CC delayed primary engraftment, reducing the time of platelet and/or
CC neutrophil engraftment following reinfusion of stem cells in a subject.
CC (M1) is also useful for increasing the number of stem cells from a donor
CC whose cells are then used for rescue of recipient subject. Also useful in
CC the treatment of thrombocytopenia. (M1) enables transplantation to
CC proceed in patients who would not otherwise be considered as candidates
CC because of unacceptably high risk of failed engraftment, reduces the
CC number of aphereses required to generate a minimum acceptable harvest,
CC reduces the incidence of primary and secondary failure of engraftment by
CC increasing the number of haematopoietic stem cells (HSCs) available for
CC transplantation and reduces the time required for primary engraftment.
CC The present sequence represents an example of TPO mimetic peptide
CC fragment.

PT beta-3 antagonists useful for the treatment or prevention of e.g. bone
PT metabolism, inflammation, cancer and cell growth.
XX
XX Example 7; SEQ ID NO 5; 182pp; English.
PS
XX This invention relates to novel nitrogen containing integrin targeting
CC compounds, their stereoisomers, tautomers or salts thereof. Specifically,
CC it refers to integrin targeting compounds that comprise small MW, RGD
CC peptidomimetic integrin targeting agent-linker conjugates that are linked
CC to polymers such as a protein. The present invention describes compounds
CC that can be useful for the treatment or prevention of diseases that
CC involve integrin-alpha, and can be used to treat a defect in
CC angiogenesis, bone metabolism, inflammation, cancer or cell growth.
CC Accordingly, they exhibit antiangiogenic, osteopathic, antiinflammatory
CC and cytostatic activities. This peptide sequence is a TPO mimetic peptide
CC given in an exemplification of the invention.

PT New peptide-based compound comprising a peptide moiety, a spacer moiety
PT and a water-soluble polymer moiety useful as pharmaceuticals.
XX
XX Example 15; Page 46; 57pp; English.
PS
XX The invention relates to a peptide-based compound (I) comprising a
CC peptide moiety, a spacer moiety and a water-soluble polymer moiety (e.g.
CC polyethylene glycol, PEG). Also included is a pharmaceutical composition
CC comprising (I) and one or more pharmaceutically acceptable diluents,
CC preservatives, solubilizers, emulsifiers, adjuvants and/or carriers. The
CC peptide moiety comprises one or more peptides that bind to erythropoietin
CC -receptors or thrombopoietin-receptors. The peptide based compound is
CC useful as a pharmaceutical. The peptide moiety particularly
CC erythropoietin receptors are essential in the process of red blood cell
CC formation and has useful applications in both diagnosis and the treatment
CC of blood disorders characterized by low or defective red blood cell
CC production. The peptide based compound has improved antigenicity and
CC durability. Polyethylene glycolylation leads to improved drug efficacy and
CC safety, increases bioavailability and decreases immunogenicity and dosing
CC frequency. The present sequence is a thrombopoietin-receptor modulating
CC peptide.

CC an EPO mimetic or a TPO mimetic; or a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced by a peptide
CC mimetic including SEQ ID NO. 126 (not defined in the specification),
CC where X at each occurrence represents any amino acid. Also described are:
CC a nucleic acid encoding an immunoglobulin molecule or its fragment; an
CC expression vector comprising the nucleic acid of (1); a host cell
CC transformed with the expression vector of (2); producing an

CC immunoglobulin molecule or its fragment; and a composition comprising the
CC immunoglobulin or its fragment and a pharmaceutical carrier. Also
CC disclosed are: engineering immunoglobulin molecules or fragments;
CC creation of a library of monoclonal antibodies; stimulating
CC proliferation, differentiation, or growth of megakaryocytes; and
CC activating a homodimeric receptor protein. The immunoglobulin molecules
CC are useful for treating HIV-infected patients, patients undergoing
CC chemotherapy, bone marrow transplant patients, stem cell transplant
CC patients, or patients suffering from myeloproliferative disorders. This
CC is the amino acid sequence of an agonist TPO mimetic peptide used to
CC replace a CDR in a rationally designed antibody.

PT New immunoglobulin molecule comprising a region where amino acid residues
PT corresponding to at least a portion of a complementarity determining
PT region is replaced with a peptide, for treating congestive heart failure,
PT diabetes or obesity.
XX
PS Example 1; SEQ ID NO 1; 152pp; English.
XX
CC The invention relates to an immunoglobulin (Ig) molecule or its fragment
CC comprising a region where amino acid residues corresponding to at least a
CC portion of a complementarity determining regions (CDR) is replaced with a
CC peptide selected from human brain natriuretic protein (hBNP), hBNP
CC mimetics, glycogen phosphorylase (GLP)-1, GLP-1 mimetics, GLP-2, GLP-2
CC mimetics, exendin, exendin mimetics, glucagons, glucagon mimetics and
CC PACAP-38. Also included are a nucleic acid encoding the immunoglobulin
CC molecule, an expression vector comprising the nucleic acid, a host cell
CC transformed with the expression vector, producing an immunoglobulin
CC molecule (or its fragment, comprising culturing the host cell under
CC conditions suitable for expression of the immunoglobulin or its
CC fragment), a composition comprising an immunoglobulin (or its fragment)
CC and a pharmaceutically acceptable carrier, treating congestive heart

CC failure (comprising administering to the subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a peptide
CC selected from hBNP and hBNP mimetics), treating diabetes or obesity
CC (comprising administering to a subject an immunoglobulin molecule or its
CC fragment comprising a region where amino acid residues corresponding to
CC at least a portion of a CDR is replaced with a peptide selected from GLP-
CC 1, GLP-1 mimetics, GLP-2, GLP-2 mimetics, exendin, exendin mimetics,
CC glucagons, glucagons mimetics and PACAP-38), preserving/improving beta-
CC cell function (comprising administering to a subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with GLP-1),
CC inducing endothelial-dependent relaxation of precontracted pulmonary
CC artery rings (comprising administering to a subject an immunoglobulin
CC molecule or fragment thereof comprising a region where amino acid
CC residues corresponding to at least a portion of a CDR is replaced with
CC GLP-1) and administering to a subject an immunoglobulin molecule or its
CC fragment (comprising a region where amino acid residues corresponding to
CC at least a portion of a complementarity determining regions (CDR) is
CC replaced with a thiazolidinedione derivative), regulating adiponectin
CC expression (comprising administering to a subject an immunoglobulin
CC molecule or its fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a
CC thiazolidinedione derivative). The immunoglobulin is an anti-tetanus
CC toxoid antibody (TT) where the heavy chain CDR2 and/or CDR3 are fully or
CC partially replaced with a peptide listed above or (as described in the
CC examples) a Thrombopoietin (TPO) mimetic , erythropoietin (EPO) mimetic
CC or ANP (atrial natriuretic peptide). The molecule, composition and
CC methods are useful for treating congestive heart failure, diabetes or
CC obesity. The present sequence is a TPO mimetic peptide (full length, core
CC or flanked by random amino acids) for inclusion in an immunoglobulin of
CC the invention.

XX
CC The invention relates to peptide compounds composed of two peptide chains
CC attached to each of the amino groups of a single Lys in the amide form.
CC The compounds are of formula (Pep1) (Pep2)K(NH2), where Pep1 is of
CC formula: X1-I-E-X2-P-T-L-X3-X4-X5-L-X6-X7-X8-X9-X10; and pep2 is of
CC formula: X1-I-E-X2-P-T-L-X3-X4-X5-L-X6-X7-X8-X9'-X10'. X1 = H or acyl; X2
CC = Gly or Sar (sarcosine); X3 = Arg, Ala, Nle (norleucine) or N-
CC acetyllysine; X4 = Gln or Glu; X5 = Trp, L-1-naphthylalanine or Phe; X6 =
CC Ala, 5-aminopentanoic acid or 2-aminobutyric acid; X7 = Ala,
CC diphenylalanine, or is absent; X8 = Arg, p- amino-phenylalanine, N-
CC acetyl-lysine, or is absent; X9, X9' = Ala, beta Ala, N-methyl-alanine,
CC Sar, or is absent; X10, X10' = beta Ala or is absent. The new peptides
CC are capable of binding to, and activating, the thrombopoietin (TPO)
CC receptor. They may be used in vitro as tools for understanding the
CC biological role of TPO. They may be used as competitive binders in assays
CC to screen for new TPO receptor agonists. They may be used as reagents for
CC detecting TPO receptors in living cells, biological fluids, etc. They may
CC be used to maintain growth and proliferation of TPO-dependent cells and
CC for in vitro expansion of megakaryocytes. They may be used to activate
CC TPO receptors in vivo, e.g., to treat blood disorders or
CC thrombocytopenia associated with bone marrow transfusions, radiotherapy
CC or chemotherapy. The present sequence represents a specific example of
CC (Pep1)K(NH2)

Increasing hematopoietic stem cell production in subject, useful in
reducing the incidence of delayed primary engraftment, comprises
administering a Thrombopoietin mimetic compound e.g., a peptide to a
subject.

Disclosure; Fig 2; 32pp; English.

The invention relates to a method (M1) for increasing haematopoietic stem
cell production in a subject which involves administering a
Thrombopoietin (TPO) mimetic compound to the subject. Also included is
another method (M2) of providing haematopoietic stem cells to a subject
which involves administering a TPO mimetic compound to a subject to
enhance expansion of a stem cell population within bone marrow and/or
mobilize stem cells in peripheral circulation, harvesting one or more of
the bone marrow stem cells or the stem cells in the peripheral
circulation, and transplanting the harvested stem cells into the subject.
A method (M3) is also provided for reducing a time to engraftment
following reinfusion of stem cells in a subject, involves administering a
TPO mimetic compound to the subject, enhancing the expansion of the stem
cell population within bone marrow and/or mobilizing the stem cells in
peripheral circulation, harvesting one or more of the bone marrow stem
cells or one or more of the stem cells in the peripheral circulation, and
transplanting the one or more harvested stem cells into the subject. TPO
mimetic compounds are disclosed as peptides, including cyclic or modified
peptides. (M1) is useful for increasing haematopoietic stem cell
production in a subject e.g., human. (M3) is useful for reducing time to
engraftment following reinfusion of stem cells, reducing the incidence of
delayed primary engraftment, reducing the incidence of secondary failure
of platelet production and reducing the time of platelet and/or
neutrophil engraftment following reinfusion of stem cells in a subject.

(M1) is also useful for increasing the number of stem cells from a donor
whose cells are then used for rescue of recipient subject. Also useful in
the treatment of thrombocytopenia. (M1) enables transplantation to
proceed in patients who would not otherwise be considered as candidates
because of unacceptably high risk of failed engraftment, reduces the
number of aphereses required to generate a minimum acceptable harvest,
reduces the incidence of primary and secondary failure of engraftment by
increasing the number of haematopoietic stem cells (HSCs) available for
transplantation and reduces the time required for primary engraftment.
The present sequence represents an example of TPO mimetic peptide
fragment.

The invention relates to a method (M1) for increasing haematopoietic stem
cell production in a subject which involves administering a
Thrombopoietin (TPO) mimetic compound to the subject. Also included is
another method (M2) of providing haematopoietic stem cells to a subject
which involves administering a TPO mimetic compound to a subject to
enhance expansion of a stem cell population within bone marrow and/or
mobilize stem cells in peripheral circulation, harvesting one or more of
the bone marrow stem cells or the stem cells in the peripheral
circulation, and transplanting the harvested stem cells into the subject.
A method (M3) is also provided for reducing a time to engraftment
following reinfusion of stem cells in a subject, involves administering a
TPO mimetic compound to the subject, enhancing the expansion of the stem
cell population within bone marrow and/or mobilizing the stem cells in
peripheral circulation, harvesting one or more of the bone marrow stem
cells or one or more of the stem cells in the peripheral circulation, and
transplanting the one or more harvested stem cells into the subject. TPO
mimetic compounds are disclosed as peptides, including cyclic or modified
peptides. (M1) is useful for increasing haematopoietic stem cell
production in a subject e.g., human. (M3) is useful for reducing time to
engraftment following reinfusion of stem cells, reducing the incidence of
delayed primary engraftment, reducing the incidence of secondary failure
of platelet production and reducing the time of platelet and/or
neutrophil engraftment following reinfusion of stem cells in a subject.

CC A method (M3) is also provided for reducing a time to engraftment
CC following reinfusion of stem cells in a subject, involves administering a
CC TPO mimetic compound to the subject, enhancing the expansion of the stem
CC cell population within bone marrow and/or mobilizing the stem cells in
CC peripheral circulation, harvesting one or more of the bone marrow stem
CC cells or one or more of the stem cells in the peripheral circulation, and
CC transplanting the one or more harvested stem cells into the subject. TPO
CC mimetic compounds are disclosed as peptides, including cyclic or modified
CC peptides. (M1) is useful for increasing haematopoietic stem cell
CC production in a subject e.g., human. (M3) is useful for reducing time to
CC engraftment following reinfusion of stem cells, reducing the incidence of
CC delayed primary engraftment, reducing the incidence of secondary failure
CC of platelet production and reducing the time of platelet and/or
CC neutrophil engraftment following reinfusion of stem cells in a subject.
CC (M1) is also useful for increasing the number of stem cells from a donor
CC whose cells are then used for rescue of recipient subject. Also useful in
CC the treatment of thrombocytopenia. (M1) enables transplantation to
CC proceed in patients who would not otherwise be considered as candidates
CC because of unacceptably high risk of failed engraftment, reduces the
CC number of aphereses required to generate a minimum acceptable harvest,
CC reduces the incidence of primary and secondary failure of engraftment by
CC increasing the number of haematopoietic stem cells (HSCs) available for
CC transplantation and reduces the time required for primary engraftment.
CC The present sequence represents an example of TPO mimetic peptide
CC fragment.

PT New nitrogen containing integrin targeting compounds are integrin alpha-v
PT beta-3 antagonists useful for the treatment or prevention of e.g. bone
PT metabolism, inflammation, cancer and cell growth.

XX PS Example 7; SEQ ID NO 6; 182pp; English.

XX
CC This invention relates to novel nitrogen containing integrin targeting
CC compounds, their stereoisomers, tautomers or salts thereof. Specifically,
CC it refers to integrin targeting compounds that comprise small MW, RGD
CC peptidomimetic integrin targeting agent-linker conjugates that are linked
CC to polymers such as a protein. The present invention describes compounds

CC that can be useful for the treatment or prevention of diseases that
CC involve integrin-alpha, and can be used to treat a defect in
CC angiogenesis, bone metabolism, inflammation, cancer or cell growth.
CC Accordingly, they exhibit antiangiogenic, osteopathic, antiinflammatory
CC and cytostatic activities. This peptide sequence is a modified TPO
CC mimetic peptide with amino Cys given in an exemplification of the
CC invention.

PT New peptide-based compound comprising a peptide moiety, a spacer moiety
PT and a water-soluble polymer moiety useful as pharmaceuticals.
XX
PS Example 14; Page 43; 57pp; English.
XX
CC The invention relates to a peptide-based compound (I) comprising a
CC peptide moiety, a spacer moiety and a water-soluble polymer moiety (e.g.
CC polyethylene glycol, PEG). Also included is a pharmaceutical composition
CC comprising (I) and one or more pharmaceutically acceptable diluents, The
CC preservatives, solubilizers, emulsifiers, adjuvants and/or carriers. The
CC peptide moiety comprises one or more peptides that bind to erythropoietin
CC -receptors or thrombopoietin-receptors. The peptide based compound is
CC useful as a pharmaceutical. The peptide moiety particularly
CC erythropoietin receptors are essential in the process of red blood cell
CC formation and has useful applications in both diagnosis and the treatment
CC of blood disorders characterized by low or defective red blood cell

CC production. The peptide based compound has improved antigenicity and
CC durability. Polyethylene glycolylation leads to improved drug efficacy and
CC safety, increases bioavailability and decreases immunogenicity and dosing
CC frequency. The present sequence is a thrombopoietin-receptor modulating
CC peptide.

PT New immunoglobulin molecule comprises a region where amino acid residues
PT corresponding to a portion of complementarity determining region (CDR) is
PT replaced with a peptide mimetic, useful for treating, e.g. HIV-infected
PT patients.
XX
PS Disclosure; SEQ ID NO 2; 139pp; English.
XX
CC The invention describes an immunoglobulin molecule or its fragment
CC comprising: a region where amino acid residues corresponding to at least
CC a portion of two CDRs are replaced with a peptide mimetic selected from
CC an EPO mimetic or a TPO mimetic; or a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced by a peptide
CC mimetic including SEQ ID NO. 126 (not defined in the specification),
CC where X at each occurrence represents any amino acid. Also described are:
CC a nucleic acid encoding an immunoglobulin molecule or its fragment; an
CC expression vector comprising the nucleic acid of (1); a host cell
CC transformed with the expression vector of (2); producing an
CC immunoglobulin molecule or its fragment; and a composition comprising the
CC immunoglobulin or its fragment and a pharmaceutical carrier. Also
CC disclosed are: engineering immunoglobulin molecules or fragments;
CC creation of a library of monoclonal antibodies; stimulating
CC proliferation, differentiation, or growth of megakaryocytes; and
CC activating a homodimeric receptor protein. The immunoglobulin molecules
CC are useful for treating HIV-infected patients, patients undergoing
CC chemotherapy, bone marrow transplant patients, stem cell transplant
CC patients, or patients suffering from myeloproliferative disorders. This
CC is the amino acid sequence of an agonist TPO mimetic peptide used to
CC replace a CDR in a rationally designed antibody.

XX
PT New immunoglobulin molecule comprising a region where amino acid residues
PT corresponding to at least a portion of a complementarity determining
PT region is replaced with a peptide, for treating congestive heart failure,
PT diabetes or obesity.
XX
PS Disclosure; SEQ ID NO 2; 152pp; English.
XX
CC The invention relates to an immunoglobulin (Ig) molecule or its fragment
CC comprising a region where amino acid residues corresponding to at least a
CC portion of a complementarity determining regions (CDR) is replaced with a
CC peptide selected from human brain natriuretic protein (hBNP), hBNP
CC mimetics, glycogen phosphorylase (GLP)-1, GLP-1 mimetics, GLP-2, GLP-2
CC mimetics, exendin, exendin mimetics, glucagons, glucagon mimetics and
CC PACAP-38. Also included are a nucleic acid encoding the immunoglobulin
CC molecule, an expression vector comprising the nucleic acid, a host cell
CC transformed with the expression vector, producing an immunoglobulin
CC molecule (or its fragment, comprising culturing the host cell under
CC conditions suitable for expression of the immunoglobulin or its
CC fragment), a composition comprising an immunoglobulin (or its fragment)
CC and a pharmaceutically acceptable carrier, treating congestive heart
CC failure (comprising administering to the subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a peptide
CC selected from hBNP and hBNP mimetics), treating diabetes or obesity
CC (comprising administering to a subject an immunoglobulin molecule or its
CC fragment comprising a region where amino acid residues corresponding to
CC at least a portion of a CDR is replaced with a peptide selected from GLP-
CC 1, GLP-1 mimetics, GLP-2, GLP-2 mimetics, exendin, exendin mimetics,
CC glucagons, glucagons mimetics and PACAP-38), preserving/improving beta-
CC cell function (comprising administering to a subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with GLP-1),
CC inducing endothelial-dependent relaxation of precontracted pulmonary
CC artery rings (comprising administering to a subject an immunoglobulin
CC molecule or fragment thereof comprising a region where amino acid
CC residues corresponding to at least a portion of a CDR is replaced with
CC GLP-1) and administering to a subject an immunoglobulin molecule or its
CC fragment (comprising a region where amino acid residues corresponding to

CC at least a portion of a complementarity determining regions (CDR) is
CC replaced with a thiazolidinedione derivative), regulating adiponectin
CC expression (comprising administering to a subject an immunoglobulin
CC molecule or its fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a
CC thiazolidinedione derivative). The immunoglobulin is an anti-tetanus
CC toxoid antibody (TT) where the heavy chain CDR2 and/or CDR3 are fully or
CC partially replaced with a peptide listed above or (as described in the
CC examples) a Thrombopoietin (TPO) mimetic , erythropoietin (EPO) mimetic
CC or ANP (atrial natriuretic peptide). The molecule, composition and
CC methods are useful for treating congestive heart failure, diabetes or
CC obesity. The present sequence is a TPO mimetic peptide (full length, core
CC or flanked by random amino acids) for inclusion in an immunoglobulin of
CC the invention.

XX Thrombopoietin receptor-binding/activating peptide(s) and peptide
PT mimetic(s) - useful in treatment of haematological disorders, esp.
PT thrombocytopenia resulting from chemotherapy, etc.

PS Claim 30; Page 91; 106pp; English.
XX The present sequence is a compound which binds to thrombopoietin (TPO)
CC receptor (TR). It is part of a dimer linked by the omega amino acid to
CC the omega amino acid in the sequence in AAW09468. The compound can be
CC used for treating patients suffering from haematological disorders and
CC thrombocytopenia resulting from chemotherapy, radiation therapy or bone
CC marrow transfusions. The peptide may also be used to maintain the
CC proliferation and growth of TPO-dependent cell lines and for use in
CC biological research, for detecting TPO receptors on living cells

PS Claim 30; Page 91; 106pp; English.

XX The present peptide binds the thrombopoietin receptor (TR), has a
CC molecular weight of less than 8000 Da and a TR binding affinity as
CC expressed by an IC50 of no more than about 100 microm. It can be used to
CC treat disorders which are susceptible to treatment with a thrombopoietin
CC agonist, preferably haematological disorders and thrombocytopenia

CC resulting from chemotherapy, radiation therapy or bone marrow
CC transfusions. It can also be used diagnostically, e.g. to investigate the
CC mechanism of thrombopoietin signal transduction and receptor activation,
CC or to maintain the proliferation and growth of thrombopoietin dependent
CC cell lines

CC -!- FUNCTION: Transcriptional activator for the cbb operon (cbbLSXFP)
for RuBisCO and other Calvin cycle genes. Binds specifically to
two binding sites in the cbbR-cbbL intergenic region.
CC -!- SIMILARITY: Contains 1 HTH lysR-type DNA-binding domain.

RT "Complete genome sequence of Treponema pallidum, the syphilis

RT spirochete."

RL Science 281:375-388(1998).

CC -1- FUNCTION: Specifically dimethylates two adjacent adenosines in the

CC loop of a conserved hairpin near the 3' end of 16S rRNA in the 30S

CC particle. Its inactivation leads to kasugamycin resistance (By

CC similarity).

CC -1- SIMILARITY: Belongs to the rRNA adenine N-6-methyltransferase

CC family. KsgA subfamily.

CC

CC This Swiss-Prot entry is copyright. It is produced through a collaboration

CC between the Swiss Institute of Bioinformatics and the EMBL outstation -

CC the European Bioinformatics Institute. There are no restrictions on its

CC use as long as its content is in no way modified and this statement is not

CC removed.

CC -!- FUNCTION: Early post-infection, the reverse transcriptase converts
CC domain of the reverse transcriptase performs two functions. It
CC degrades the RNA template and specifically removes the RNA primer
CC from the RNA/DNA hybrid. Following nuclear import, the integrase
CC catalyzes the insertion of the linear, double-stranded viral DNA
CC into the host cell chromosome. Endogenous Pol proteins may have
CC kept, lost or modified their original function during evolution
CC (By similarity).

CC -!- SUBUNIT: Homodimer (By similarity).
CC -!- DOMAIN: The LPQG and YXDD motifs are catalytically important and
CC conserved among many retroviruses (By similarity).
CC -!- SIMILARITY: Contains 1 reverse transcriptase domain.

RL J. Virol. 77:6405-6418(2003).
CC -!- FUNCTION: Early post-infection, the reverse transcriptase converts
CC the viral RNA genome into double-stranded viral DNA. The RNase H
CC domain of the reverse transcriptase performs two functions. It
CC degrades the RNA template and specifically removes the RNA primer
CC from the RNA/DNA hybrid. Following nuclear import, the integrase
CC catalyzes the insertion of the linear, double-stranded viral DNA
CC into the host cell chromosome. Endogenous Pol proteins may have
CC kept, lost or modified their original function during evolution
CC (By similarity).

CC -!- SUBUNIT: Homodimer (By similarity).
CC -!- DOMAIN: The LPQG and YXDD motifs are catalytically important and
CC conserved among many retroviruses (By similarity).
CC -!- SIMILARITY: Contains 1 reverse transcriptase domain.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC This sequence represents a thrombopoietin (TPO) receptor (TR) binding
CC peptide of the invention. The peptide has: (i) a molecular weight below
CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
CC mM. The peptides are used to treat conditions requiring a thrombopoietin
CC agonist, particularly haematological disorders or thrombocytopaenia,
CC especially resulting from chemotherapy, radiation therapy or bone marrow
CC transfusions. Also when labelled they may be used for diagnosis
CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
CC in vitro expansion of megakaryocytes and committed progenitor cells, and
CC for the development/identification of other TR agonists. The compounds
CC accelerate thrombocyte regeneration

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 210; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 210; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to

XX
PS Claim 39; Page 43; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytosstatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX
CC      This invention relates to novel mammalian CDR mimetibodies, specific
CC      portions or variants thereof. Specifically, it refers to an antibody
CC      fragment where a protein has been inserted into, or replaces a portion
CC      of, one or more CDR regions, such that each CDR mimetibody comprises at
CC      least one portion of a heavy chain or light chain variable region, which
CC      itself comprises at least one human framework region and at least one
CC      ligand binding region (LBR). The present invention describes human
CC      mimetibodies, including modified immunoglobulins and cleavage products
CC      that can be useful in gene therapy and the generation of transgenic
CC      plants and animals. Furthermore, the CDR mimetibody is useful for
CC      preparing compositions for modulating, treating or reducing the symptoms
CC      of immune, cardiovascular, infectious, malignant and/ or neurologic
CC      diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC      cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC      peptide sequence is a TPO mimetic peptide sequence used to make a
CC      mimetibody of the invention.

XX New CH1 deleted mimetibody polypeptide and nucleic acid, useful for

PT diagnosing, preventing or treating cardiovascular, dermatologic,

PT endocrine, gastrointestinal, gynecologic, infectious, neurologic and

PT nutritional disorders.

XX Claim 14; SEQ ID NO 479; 123pp; English.

PS This invention relates to CH1 deleted mimetibodies (and the DNA sequences

XX which encode them), compositions, methods and uses. The invention may be

CC useful for the development of compounds with an osteopathic,

CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,

CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,

CC immunomodulator, antiallergic, muscular-Gen, cytostatic,

CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or

CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-

CC modulator or cytokine-agonist. The methods and compositions of the

CC present invention are useful for the diagnosis, prevention and/or

CC treatment of diseases or conditions associated with aberrant expression

CC or activity of the CH1 deleted mimetibody, such as a bone or joint,

CC cardiovascular, dental or oral, dermatological, gynaecological, hepatic,

CC endocrine, metabolic, gastrointestinal, allergic, infectious,

CC obstetric, haematologic, immunological, nutritional, ophthalmologic,

CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,

CC pediatric, psychiatric, renal or pulmonary disorders. The present

CC sequence is that of a peptide which may be used during the creation of a

CC mimetibody of the invention.

DR New low molecular weight thrombopoietin agonists, particularly peptides,
PT for treatment of hematological disease and thrombocytopenia.
XX Disclosure; Col 15; 36pp; English.
PS This sequence represents a thrombopoietin (TPO) receptor (TR) binding
XX peptide of the invention. The peptide has: (i) a molecular weight below
CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
CC mM. The peptides are used to treat conditions requiring a thrombopoietin
CC agonist, particularly haematological disorders or thrombocytopaenia,
CC especially resulting from chemotherapy, radiation therapy or bone marrow
CC transfusions. Also when labelled they may be used for diagnosis
CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
CC in vitro expansion of megakaryocytes and committed progenitor cells, and
CC for the development/identification of other TR agonists. The compounds
CC accelerate thrombocyte regeneration

DR Novel secreted protein 5' expressed sequence tag sequences used in
XX diagnostic, forensic, gene therapy, and chromosome mapping procedures.
PT Claim 3; Page 779; 837pp; English.
PS AAZ42265 to AAZ43075 represent novel 5' expressed sequence tag (EST)
XX sequences, corresponding to human secreted proteins. AAY64651 to AAY65438
CC represent the EST-related proteins corresponding to AAZ42265 to AAZ43052.
CC The 5' ESTs can be used for producing secreted human gene products. They
CC can be used to identify and isolate 5' untranslated regions (UTRs) and
CC upstream regulatory regions which control the location, development
CC stage, rate, and quantity of protein synthesis, as well as stability of
CC mRNA. The ESTs are also useful as probes for chromosome mapping, and to
CC obtain full length cDNA clones. The ESTs can also be used in forensic
CC procedures to identify individuals, or in diagnostic procedures to
CC identify individuals having genetic diseases resulting from abnormal gene
CC expression. The products may also be used in gene therapy protocols. The
CC nucleic acids encoding signal peptides can be used for directing
CC extracellular secretion of a polypeptide or the insertion of a
CC polypeptide into a membrane, or importing a polypeptide into a cell. The
CC proteins encoded by the EST sequences may be useful in treating a variety
CC of human conditions. Secreted proteins have therapeutic value, and the
CC identification of new secreted proteins is valuable. AAZ42249 to AAZ42264
CC and AAY64644 to AAY64650 represent sequences used in the exemplification
CC of the present invention

XX New expressed sequence tags and encoded human proteins useful for
XX diagnosing, preventing or treating diseases such as autoimmune disorders,
XX inflammation, wounds or infections, or in forensic or chromosome mapping
XX procedures.
XX Example 15; SEQ ID NO 1419; 72pp; English.
XX
XX The invention relates to an isolated or purified signal peptide
XX consisting of residues 1-16 of ADU72234 (signal peptide given separately
XX as ADU73026) which directs the extracellular secretion of a polypeptide
XX to which it is operably linked. The invention also relates to a method of
XX producing the signal peptide. The invention further discloses: isolated,
XX purified or enriched 5' expressed sequence tags (ESTs), many of which
XX encode all or a part of a secretory signal peptide; polypeptides encoded
XX by these ESTs (EST-related polypeptides); antibodies which recognize the
XX EST-related polypeptides; vectors and host cells comprising EST-related
XX nucleic acids of the invention; an array of ESTs; methods involving the
XX use of signal peptides of the invention to target polypeptides; and
XX methods involving the use of ESTs of the invention, for example, in
XX identifying a promoter in genomic DNA. The EST-encoded signal peptides of
XX the invention are useful for directing the secretion or import of a
XX recombinant polypeptide via the generation of protein fusions comprising
XX such signal peptides. The ESTs, EST-related polypeptides and methods of
XX the invention can be used for forensic procedures, chromosome mapping,
XX diagnostics, and therapeutic procedures, including gene therapy.
XX Sequences ADU72215-ADU72919 represent incomplete polypeptides comprising
XX a signal peptide which are encoded by the 5' ESTs shown in ADU71427-
XX ADU72131. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly

XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at

New polynucleotide from Lactobacillus rhamnosus HN001 strain, useful for preparing a vaccine against bacterial infections or for modifying the flavor, aroma or nutritional benefits of a bioactive or probiotic supplement product.

Claim 21; SEQ ID NO 220; 54pp; English.

The present invention relates to the isolation of novel lactic acid bacteria (Lactobacillus rhamnosus strain HN001) polynucleotide sequences, and the proteins encoded by them. Also disclosed are oligonucleotide probes and primers, and genetic constructs comprising the polynucleotide sequences of the invention. The polynucleotide sequences are useful for preparing a vaccine against bacterial infections or for improving the properties of microbes used in the manufacture of milk-derived products, food products, food additives, nutritional supplements, bioactive substances or probiotic supplements, and for modifying the flavour, aroma, texture and/or nutritional value of foods. They are also useful for identifying microorganisms having a trait associated with the polynucleotide. The present sequence represents a novel L. rhamnosus polypeptide sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification. The complete sequence data for this patent was obtained in electronic format directly from the USPTO web site at seqdata.uspto.gov.

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 207; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:

CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to

PT Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

XX New thrombopoietin synthebodies, useful for stimulating proliferation,
PT growth, or differentiation of hematopoietic cells, for treating or
PT preventing hematopoietic or immune disorders, e.g. thrombocytopenia.

XX Disclosure; Page 11; 97pp; English.

XX The invention discloses a variant of an immunoglobulin (Ig) variable
PS heavy or light chain domain that comprises at least one complementarity
CC determining region (CDR) and framework regions flanking the CDR. The CDR
CC also has added or substituted to it, at least one binding sequence which
CC is heterologous to the CDR and is an antigenic, agonistic sequence from a
CC thrombopoietin (TPO) receptor binding sequence. The antigenic sequence
CC can be a binding sequence heterologous to the CDR, a cytotoxic T-
CC lymphocyte (CTL)-epitope sequence, a T-helper cell sequence, a B-helper
CC cell sequence or a combination of each. The variant or thrombopoietin
CC synthebody, pharmaceutical and vaccine compositions are useful for
CC stimulating proliferation, growth or differentiation of haematopoietic
CC cells, particularly platelet progenitor cells. The variants are also
CC useful for treating or preventing haematopoietic or immune disorders
CC resulting from chemotherapy, radiation therapy, or bone marrow
CC transfusions (e.g. thrombocytopenia or disseminated intravascular
CC coagulation). Compositions comprising the synthebodies can be used for
CC the mobilisation, amplification and ex vivo expansion of stem cells and
CC committed precursor cells for autologous and allogeneic transplantation
CC as well as for the expansion of stem cells for gene therapy. They are
CC also useful as diagnostic or analytical reagents for studying the
CC function of thrombopoietin and its receptor in vivo or in vitro. The
CC sequence presented is the TPO receptor (MPL) agonist peptide consensus
CC sequence #1

DR New CH1-deleted mimetibody polypeptides and nucleic acids, useful for

PT modulating, treating, alleviating, preventing an immune, cardiovascular,

PT or neurodegenerative disease or disorder, anemia, cancer, or infectious

PT diseases.

XX Claim 2; SEQ ID NO 468; 129pp; English.

PS This invention relates to CH1 deleted mimetibodies (and the DNA sequences

XX which encode them), compositions, methods and uses. The invention may be

CC useful for the development of compounds with an immunosuppressive,

CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,

CC antibacterial, virucide or fungicide activity. In addition, the disclosed

CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody

CC is useful for diagnosing or treating a disease condition in a cell,

CC tissue, organ or animal, specifically for modulating, treating,

CC alleviating, preventing the incidence or reducing the symptoms of an

CC immune, cardiovascular (for example arrhythmia, hypertension or heart

CC failure), or neurodegenerative (for example multiple sclerosis, dementia

CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous

CC conditions, or infectious diseases (for example bacterial, viral or

CC fungal infection). The present sequence is that of a peptide which may be

CC used during the creation of a mimetibody of the invention.

DR Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.

PT Claim 19; Page 208; 608pp; English.

PS The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-P1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1

CC of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

DR Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.

XX Claim 39; Page 43; 176pp; English.

PS The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianaemic, anorectic, antiinfertility, haemostatic, dermatological and neuroprotective activities. (I) can be used as a therapeutic or

CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,

XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

PS Claim 2; SEQ ID NO 472; 129pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,

CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an osteopathic,

CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
CC immunomodulator, antiinflammatory, muscular-Gen, cytostatic,
CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or
CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
CC modulator or cytokine-agonist. The methods and compositions of the
CC present invention are useful for the diagnosis, prevention and/or
CC treatment of diseases or conditions associated with aberrant expression
CC or activity of the CH1 deleted mimetibody, such as a bone or joint,
CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
CC obstetric, haematologic, immunological, allergic, infectious,
CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
CC pediatric, psychiatric, renal or pulmonary disorders. The present
CC sequence is that of a peptide which may be used during the creation of a
CC mimetibody of the invention.

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 211; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,

CC p3, and p4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.

XX Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,

CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

PT useful as molecular targets for diagnostics, prophylaxis and treatment of
PT pathological conditions resulting from bacterial infection.
XX Disclosure; SEQ ID NO 16704; 455pp; English.
XX The invention relates to Pseudomonas aeruginosa polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biochip technology. Sequences ABO67826-
CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The
CC sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html

PT New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX Disclosure; SEQ ID NO 10995; 21pp + Sequence Listing; English.
XX The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS

Sequences AAY43902-Y44015 represent proteins used in a novel method of
CC predicting the folded structure of proteins, by aligning sequences of
CC homologous proteins and using patterns of evolutionarily conserved and
CC varied sequences to assign positions. Positions in the alignment are
CC assigned to the surface or inside of the folded structure, active sites,
CC and parsing segments. Secondary structural units are assigned by
CC identifying periodicity in the assignments, and assembled into globular
CC form using distance constraints imposed by disulfide bridges, active site
CC assignments and co-variation analysis. The predicted secondary structures
CC are useful for identifying antigenic sites on a protein molecule, as
CC guides for site directed mutagenesis studies, and for understanding the

CC interaction of a protein with other molecules

PT a cell comprising a target polypeptide with the compound.
XX
PS Disclosure; Fig 23; 180pp; English.
XX
CC The present invention describes a method for identifying a compound (C)
CC that modulates cell cycle arrest. The method comprises contacting a cell
CC comprising a target polypeptide with the compound (C), where the target
CC polypeptide encoded by the complement of a nucleic acid that hybridises
CC under stringent conditions to a nucleic acid encoding a polypeptide
CC having an amino acid sequence selected from 18 148-1408 amino acid
CC sequences (SEQ ID NO: 2-36, even numbers only). Also described: (1)
CC modulating cell cycle arrest in a subject; (2) a CK2-specific short
CC interfering RNA (siRNA) molecule comprising the sequence: (I)
CC AACATTGAATTAGATCCACGT, where the siRNA molecule is from 21-30 nucleotide
CC base pairs in length; (3) inhibiting expression of a CK2 gene in a cell;
CC (4) a PIM1-specific siRNA molecule comprising the sequence: (II)
CC AAAACTCCGAGTGAAGTGGTC, where the siRNA molecule is from 21-30 nucleotide
CC base pairs in length; (5) inhibiting expression of a PIM1 gene in a cell;
CC (6) an Hbol-specific siRNA molecule comprising the sequence: (III)
CC AACTGAGCAAGTGGTTGATTT, where the siRNA molecule is from 21-30 nucleotide
CC base pairs in length; and (7) inhibiting expression of an Hbol gene in a
CC cell. (C) has cytostatic activity, and can be used in gene therapy. The
CC method is useful for identifying a compound (c) that modulates cell cycle
CC arrest. Compounds that modulate cell cycle arrest are useful for
CC developing therapeutic reagents for treating cancer and other
CC proliferative disorders. The present sequence represents a dominant ,

CC negative mutant of human CDC7L1, which is used in the exemplification of
CC the present invention.

PT New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 1600; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification

CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

XX New antisense nucleic acids, useful for identifying proteins or screening

PT for homologous nucleic acids required for cellular proliferation to

PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 50862; 1766pp; English.

PS The invention relates to an isolated nucleic acid comprising any one of

CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this

Database : UniProt_05.80:*
1: uniprot_sprot:*
2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RL Biochim. Biophys. Acta 1088:245-250(1991).
CC -!- FUNCTION: Removal of H(2)O(2), oxidation of toxic reductants,
CC biosynthesis and degradation of lignin, suberization, auxin
CC catabolism, response to environmental stresses such as wounding,
CC pathogen attack and oxidative stress. These functions might be
CC dependent on each isozyme/isoform in each plant tissue.
CC -!- CATALYTIC ACTIVITY: Donor + H(2)O(2) = oxidized donor + 2 H(2)O.
CC -!- COFACTOR: Binds 2 calcium ions per subunit.
CC -!- COFACTOR: Binds 1 heme B (iron-protoporphyrin IX) group per
CC subunit.
CC -!- SUBCELLULAR LOCATION: Secreted (By similarity).
CC -!- SIMILARITY: Belongs to the peroxidase family. Classical plant
CC (class III) peroxidase subfamily.

DR Novel composition of matter comprising an Fc domain and pharmacologically
XX active peptides, useful for treating cancer and autoimmune diseases.
PT Claim 19, Page 207; 608pp; English.
XX The present invention describes composition of matter (I) comprising an

CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Disclosure; SEQ ID NO 469; 97pp; English.

PS This invention relates to novel mammalian CDR mimetibodies, specific

XX portions or variants thereof. Specifically, it refers to an antibody

CC fragment where a protein has been inserted into, or replaces a portion

CC of, one or more CDR regions, such that each CDR mimetibody comprises at

CC least one portion of a heavy chain or light chain variable region, which

CC itself comprises at least one human framework region and at least one

CC ligand binding region (LBR). The present invention describes human

CC mimetibodies, including modified immunoglobulins and cleavage products

CC that can be useful in gene therapy and the generation of transgenic

CC plants and animals. Furthermore, the CDR mimetibody is useful for

CC preparing compositions for modulating, treating or reducing the symptoms

CC of immune, cardiovascular, infectious, malignant and/ or neurologic

CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,

CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This

CC peptide sequence is a TPO mimetic peptide sequence used to make a

CC mimetibody of the invention.

PT or neurodegenerative disease or disorder, anemia, cancer, or infectious

PT diseases.

XX

PS Claim 2; SEQ ID NO 469; 129pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences

CC which encode them), compositions, methods and uses. The invention may be

CC useful for the development of compounds with an immunosuppressive,

CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,

CC antibacterial, virucide or fungicide activity. In addition, the disclosed

CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody

CC is useful for diagnosing or treating a disease condition in a cell,

CC tissue, organ or animal, specifically for modulating, treating,

CC alleviating, preventing the incidence or reducing the symptoms of an

CC immune, cardiovascular (for example arrhythmia, hypertension or heart

CC failure), or neurodegenerative (for example multiple sclerosis, dementia

CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous

CC conditions, or infectious diseases (for example bacterial, viral or

CC fungal infection). The present sequence is that of a peptide which may be

CC used during the creation of a mimetibody of the invention.

XX
CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms

CC of immune, cardiovascular, infectious, malignant and/ or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 214; 608pp; English.

XX The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical

CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Activating thrombopoietin receptors in cells, used to treat
PT thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.

PS Disclosure; Col 19; 128pp; English.

XX Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin

CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.

XX Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for

CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, EPO-
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX Claim 2; SEQ ID NO 491; 129pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX Claim 19; Page 214; 608pp; English.

XX The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 43; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing

XX Novel composition of matter comprising an Fc domain and pharmacologically
DR active peptides, useful for treating cancer and autoimmune diseases.
XX Claim 19; Page 214; 608pp; English.
PT The present invention describes composition of matter (I) comprising an
PT Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
XX (X1)a-P1-(X2)b, where: P1 = an Fc domain; X1 and X2 = are each
XX independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
XX (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
XX P3, and P4 = are each independently sequences of pharmacologically active
XX peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
XX c, d, e, and f = are each independently 0 or 1, provided that at least 1
XX of a and b is 1. The composition can have cytostatic, antiasthmatic,
XX thrombolytic and immunosuppressive activities. DNAs, vectors and host
XX cells from the present invention can be used for producing pharmaceutical
XX compositions. The compositions are useful for treating cancer, asthma,
XX thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
XX a Fab domain) can provide a longer half-life or incorporate functions
XX such as Fc receptor binding, protein A binding, complement fixation, and
XX possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to

PT
XX Claim 39; Page 43; 176pp; English.
PS
XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytosstatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

XX PT Novel vehicle-peptide molecule or its multimers useful for treating
XX PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
XX PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX PS Claim 39; Page 43; 176pp; English.
XX CC The present invention describes a vehicle-peptide molecule (I) or its
XX CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
XX CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
XX CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
XX CC neuroprotective activities. (I) can be used as a therapeutic or
XX CC prophylactic agent as well as for screening purposes. (I) is useful for
XX CC diagnosing diseases characterised by dysfunction of their associated
XX CC protein of interest, for identifying normal or abnormal proteins of
XX CC interest, as a part of diagnostic kit to detect the presence of their
XX CC proteins of interest in a biological sample. Additionally, (I) is useful
XX CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
XX CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
XX CC infertility, and neurological degenerative diseases. (I), comprising EPO-
XX CC mimetic compounds are useful for treating disorders characterised by low
XX CC red blood cell levels such as anaemia. The TPO-mimetic comprising
XX CC compounds are useful for treating conditions that involve an existing
XX CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
XX CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
XX CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
XX CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

XX PT New CDR mimetibody comprising a portion of a heavy or light chain
XX PT variable region comprising human framework or ligand binding region,
XX PT useful for preparing a composition for treating e.g., immune,
XX PT cardiovascular or neurologic disease.
XX PS Disclosure; SEQ ID NO 484; 97pp; English.
XX CC This invention relates to novel mammalian CDR mimetibodies, specific
XX CC portions or variants thereof. Specifically, it refers to an antibody
XX CC fragment where a protein has been inserted into, or replaces a portion
XX CC of, one or more CDR regions, such that each CDR mimetibody comprises at
XX CC least one portion of a heavy chain or light chain variable region, which
XX CC itself comprises at least one human framework region and at least one
XX CC ligand binding region (LBR). The present invention describes human
XX CC mimetibodies, including modified immunoglobulins and cleavage products
XX CC that can be useful in gene therapy and the generation of transgenic
XX CC plants and animals. Furthermore, the CDR mimetibody is useful for
XX CC preparing compositions for modulating, treating or reducing the symptoms
XX CC of immune, cardiovascular, infectious, malignant and/ or neurologic
XX CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
XX CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
XX CC peptide sequence is a TPO mimetic peptide sequence used to make a
XX CC mimetibody of the invention.

CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX PT Novel composition of matter comprising an Fc domain and pharmacologically
XX active peptides, useful for treating cancer and autoimmune diseases.
XX
XX PS Claim 19; Page 219; 608pp; English.
XX
XX CC The present invention describes composition of matter (I) comprising an
XX Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
XX (X1)a-P1-(X2)b, where: P1 = an Fc domain; X1 and X2 = are each
XX independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
XX (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
XX P3, and P4 = are each independently sequences of pharmacologically active
XX peptides; L1, L2, L3, and L4 = are each independently 0 or 1, provided that at least 1
XX of a, d, e, and f = are each independently 0 or 1, provided that at least 1
XX of a and b is 1. The composition can have cytostatic, antiasthmatic,
XX thrombolytic and immunosuppressive activities. DNAs, vectors and host
XX cells from the present invention can be used for producing pharmaceutical
XX compositions. The compositions are useful for treating cancer, asthma,
XX thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
XX a Fab domain) can provide a longer half-life or incorporate functions
XX such as Fc receptor binding, protein A binding, complement fixation, and
XX possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 215; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

PT Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 44; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, EPO-
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

Database : UniProt_05.80.*
1: uniprot_sprot.*
2: uniprot_trembl.*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: Specifically dimethylates two adjacent adenosines in the
CC loop of a conserved hairpin near the 3'end of 16S rRNA in the 30S
CC particle. Its inactivation leads to kasugamycin resistance (By
CC similarity).
CC -!- SIMILARITY: Belongs to the rRNA adenine N-6-methyltransferase
CC family. KsgA subfamily.

CC -!- INDUCTION: Overexpressed by estrogens in breast cancer MCF-7
CC cells, probably via an activation of nuclear receptors for
CC steroids (ESR1 and ESR2).
CC -!- MISCELLANEOUS: Overexpression may promote MCF-7 cells
CC proliferation.
CC -!- SIMILARITY: Contains 1 Alpp domain.

RT "Proteomics of the chloroplast envelope membranes from Arabidopsis thaliana.";

RL Mol. Cell. Proteomics 2:325-345(2003).

CC -!- FUNCTION: Involved in protein import into chloroplasts. Seems to recognize chloroplast-destined precursor proteins and regulate their presentation to the translocation channel through GTP hydrolysis.

CC -!- SUBUNIT: Interacts with Toc75.

CC -!- SUBCELLULAR LOCATION: Chloroplast; outer membrane.

CC -!- SIMILARITY: Belongs to the TOC34 family.

CC -----

CC This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not removed.

PT New low molecular weight thrombopoietin agonists, particularly peptides,
PT for treatment of hematological disease and thrombocytopaenia.
XX
PS Disclosure; Col 13-14; 36pp; English.

XX This sequence represents a thrombopoietin (TPO) receptor (TR) binding
CC peptide of the invention. The peptide has: (i) a molecular weight below
CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
CC mM. The peptides are used to treat conditions requiring a thrombopoietin
CC agonist, particularly haematological disorders or thrombocytopaenia,

CC especially resulting from chemotherapy, radiation therapy or bone marrow
CC transfusions. Also when labelled they may be used for diagnosis
CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
CC in vitro expansion of megakaryocytes and committed progenitor cells, and
CC for the development/identification of other TR agonists. The compounds
CC accelerate thrombocyte regeneration

XX Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.

PS Claim 19; Page 207; 608pp; English.

XX The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P'3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and

CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

PT Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.

XX

PS Claim 39; Page 43; 176pp; English.

XX

CC The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianaemic, anorectic, antiinfertility, haemostatic, dermatological and neuroprotective activities. (I) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (I) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteases of interest, as a part of diagnostic kit to detect the presence of their proteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic tumour which result in thrombocytopaenia, systemic lupus erythematosus, and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777 represent amino acid and nucleic acid sequences used in the exemplification of the present invention

PT New CDR mimetibody comprising a portion of a heavy or light chain variable region comprising human framework or ligand binding region, useful for preparing a composition for treating e.g., immune, cardiovascular or neurologic disease.

XX

PS Disclosure; SEQ ID NO 470; 97pp; English.

XX

CC This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/ or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,

CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX
CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX
PT New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 2776; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the

CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT encoding a nitrite reductase, useful for determining gene expression,
PT identifying mutations in a gene of interest, and for constructing
PT mutations in a gene of interest.
XX
PS Example 2; SEQ ID NO 10913; 25pp; English.
XX
CC The invention relates to a substantially purified nucleic acid molecule
CC encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a
CC recombinant DNA construct for expression of a nitrite reductase gene in a
CC plant cell, and a plant cell comprising the recombinant DNA construct.
CC The nucleic acid is useful for determining gene expression, identifying
CC mutations in a gene of interest, and for constructing mutations in a gene
CC of interest. Sequences given in records for SEQ IDs 9692-16825 represent
CC a group of 7134 Myxococcus xanthus proteins and peptides. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from USPTO

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 3909; 122pp; English.
PS
XX The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New nucleic acid that is a pancreatic cancer antigen for preventing,
PT treating, or ameliorating a medical condition, particular pancreatic
PT cancer, or for use in assays for diagnosing a pathological condition.
XX

PS Claim 11; Page 1188; 1379pp; English.

XX AAC98773 to AAC99231 encode the human pancreatic cancer associated
CC proteins, called pancreatic cancer antigens, given in AAB54008 to
CC AAB54466. The human pancreatic cancer antigens have cytostatic,
CC neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive,
CC gynaecological, cardiant and antiinflammatory activities, and can be used
CC in gene therapy. The polynucleotide and proteins can be used for
CC preventing, treating, or ameliorating a medical condition or in assays
CC for diagnosing a pathological condition or a susceptibility to one in a
CC subject. Binding partners to the proteins and the activity of the
CC proteins can be identified. The pancreatic cancer antigens can be used to
CC detect, treat or prevent pancreatic disorders, especially cancer.
CC Agonists and antagonists to the antigens can be screened for. The
CC pancreatic cancer antigen polynucleotides can be used to design nucleic
CC acid hybridisation probes that can be used in chromosome mapping, linkage
CC analysis, tissue identification and/or typing and a variety of forensic
CC and diagnostic methods. The proteins can be used to generate antibodies
CC which are used to purify, detect and target the polypeptides, including
CC both in vivo and in vitro diagnostic and therapeutic methods. The
CC proteins can be used to treat or prevent neural, immune system, muscular,
CC reproductive, gastrointestinal, pulmonary, cardiovascular, renal or
CC proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent
CC sequences used in the exemplification of the present invention

XX
XX Novel D-aminoacylase-encoding gene derived from filamentous fungus
PT Hypomyces mycophilus, useful for producing D-tryptophan from N-acetyl-D-
PT tryptophan, useful as medicinal raw material.
XX
XX Claim 1; Page 17-20; 33pp; English.
PS
XX This sequence shows a D-aminoacylase polypeptide. D-aminoacylase has
CC physicochemical properties that include the action of the enzyme on N-
CC acetyl-D-amino acids to produce the corresponding D-amino acids, and
CC substrate specificity, where the enzyme acts on N-acetyl-D-tryptophan, N-
CC acetyl-D-phenylalanine, N-acetyl-D-valine, N-acetyl-D-leucine, and N-
CC acetyl-D-methionine, but not on N-acetyl-L-tryptophan, N-acetyl-L-
CC phenylalanine, N-acetyl-L-valine, N-acetyl-L-leucine, or N-acetyl-L-
CC methionine. Fragments of the D-aminoacylase cDNA are useful as primers or
CC as probes for synthesizing or detecting the full length cDNA. D-
CC aminoacylase is useful for producing D-amino acids. The enzyme has
CC substrate specificity, thermal stability and produces D-amino acid
CC efficiently by incubating the fungus derived D-aminoacylase with N-acetyl
CC -D-amino acid under proper conditions. The enzyme has high enzymatic
CC activity for N-acetyl-D-tryptophan and is excellent in industrial
CC applicability. The recombinant polypeptide of D-aminoacylase can be
CC manufactured at a low cost and in large quantities

PT New isolated Mycobacterium tuberculosis polypeptides and DNA - used to
PT develop products for the detection of M. tuberculosis infection and
PT diagnosis of tuberculosis.
XX
PS Example 3; Page 173-175; 250pp; English.
XX
CC This polypeptide comprises Mycobacterium tuberculosis antigen XP14. Its
CC amino acid sequence was deduced from a DNA molecule (see AAV44415)
CC isolated from a M. tuberculosis strain Erdman genomic DNA expression
CC library using sera from patients having extrapulmonary tuberculosis. XP14
CC shows some sequence similarity to known sequences. The invention relates
CC to compositions and methods for diagnosing tuberculosis. It provides
CC polypeptides (see AAW64291-W64379) comprising an antigenic portion of a
CC soluble M. tuberculosis antigen, or an immunogenic portion of a M.
CC tuberculosis antigen, as well as DNA sequences encoding such

CC polypeptides, recombinant expression vectors and transformed or
CC transfected host cells. Also claimed are methods and diagnostic kits for
CC detecting M. tuberculosis infection in a patient using these
CC polypeptides, antibodies or oligonucleotide probes and primers. (Updated
CC on 17-OCT-2003 to standardise OS field)

PT Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris.
XX
PS Example 1; SEQ ID NO 15353; 1069pp; English.
XX
CC Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC P. acnes is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of P. acnes in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for P. acnes proteins. These antibodies can be used to
CC downregulate expression and activity of P. acnes polypeptides and
CC therefore treat P. acnes infections. The antibodies may also be used as
CC diagnostic agents for determining P. acnes presence, for example, by
CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at

CC additionally encompasses expression vectors and host cells comprising a

CC polynucleotide of the invention; antibodies against polypeptides of the

CC invention; fusion proteins comprising a polypeptide of the invention; a

CC method for stimulating an immune response specific for a P. acnes

CC polypeptide and an isolated T cell population comprising T cells prepared

CC via this method; a vaccine composition (comprising P. acnes polypeptides,

CC polynucleotides, antibodies, fusion proteins, T cell populations, or

CC antigen-presenting cells that express the polypeptide); a method and kit

CC for detecting or determining the presence or absence of P. acnes in a

CC patient; and a method for inhibiting the development of P. acnes in a

CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion

CC proteins, T cell populations or antigen-presenting cells that express the

CC polypeptides are useful for diagnosing, preventing or treating acne

CC vulgaris, or for stimulating an immune response specific for a P. acnes

CC protein. The polynucleotides can also be used as probes or primers for

CC nucleic acid hybridisation. The vaccine composition is useful for the

CC stimulation of an immune response against P. acnes, or for treating acne,

CC and the kit is useful for performing a diagnostic assay. The present

CC sequence represents a polypeptide predicted to be encoded by an ORF (open

CC reading frame) contained within the P. acnes polynucleotides of the

CC invention. Note: The sequence data for this patent did not form part of

CC the printed specification, but was obtained in electronic format directly

CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New isolated cancer-associated polynucleotides and polypeptides useful
PT for diagnosing, preventing or treating cancers, especially lymphoma and
PT leukemia, or in screening for agents that modulate cancer.
XX
PS disclosure; seqid 687; 310pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells (comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a mouse CAP protein sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO

PT New recombinant DNA constructs useful in the field of biochemistry and
PT genetics, and in particular for producing transgenic plants with improved
PT biological characteristics.

PS Claim 2; SEQ ID NO 8014; 14pp; English.

XX
CC The invention relates a recombinant DNA construct comprising a
CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
CC Arabidopsis, wheat and rape but the specification does not indicate which
CC sequences is derived from which organism. Also included is a method of
CC producing a plant having an improved property, comprising transforming a
CC plant with a recombinant DNA construct comprising a promoter region
CC functional in a plant cell operably joined to a polynucleotide encoding a
CC polypeptide associated with the property, and growing the transformed
CC plant. The property is selected from improving plant cold tolerance, for
CC manipulating growth rate in plant cells by modification of the cell cycle
CC pathway, for improving plant drought tolerance, for providing increased
CC resistance to plant disease, for galactomannan production, for production
CC of plant growth regulators, for improving plant heat tolerance, for
CC improving plant tolerance to herbicides, for increasing the rate of
CC homologous recombination in plants, for lignin production, for improving
CC plant tolerance to extreme osmotic conditions, for improving plant
CC tolerance to pathogens or pests, for yield improvement by modification of
CC photosynthesis, for modifying seed oil yield and/or content, for
CC modifying seed protein yield and/or content, for yield improvement by
CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
CC and for yield improvement by providing improved plant growth and
CC development under at least one stress condition. The polynucleotide may
CC also encode a plant transcription factor. The methods and compositions of
CC the present invention are useful in the field of biochemistry and
CC genetics, in particular for producing transgenic plants with improved
CC biological characteristics such as increased yield, improved nitrogen
CC flow, increasing plant tolerance to cold or heat, improving plant
CC tolerance to extreme osmotic and drought conditions, and improving plant
CC tolerance to plant pests or pathogens. They can also be used in physical
CC arrays of molecules, plant breeding markers, computer-based storage and
CC analysis systems. The present sequence is one of the 5544 plant protein
CC sequences of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

PT New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 18956; 122pp; English.
PS
XX The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polypeptide used in the
CC scope of the invention. Note: The sequence data for this patent did not
CC form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris.
XX
XX Example 1; SEQ ID NO 25950; 1069pp; English.
PS
XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
CC polypeptides. The proteins and their associated DNA sequences are used in
CC the treatment, prevention and diagnosis of medical conditions caused by
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
CC P. acnes is also involved in infections of bone, joints and the central
CC nervous system, however it is particularly involved in the inflammatory
CC lesions associated with acne vulgaris. A method for detecting the
CC presence or absence of P. acnes in a patient comprises contacting a
CC sample with a binding agent that binds to the proteins of the invention
CC and determining the amount of bound protein in the sample. The
CC polypeptides may be used as antigens in the production of antibodies
CC specific for P. acnes proteins. These antibodies can be used to
CC downregulate expression and activity of P. acnes polypeptides and
CC therefore treat P. acnes infections. The antibodies may also be used as
CC diagnostic agents for determining P. acnes presence, for example, by
CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
XX New Propionibacterium acnes polypeptides and polynucleotides encoding the
PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
PT or for stimulating an immune response specific for a P. acnes protein.
XX
PS Example 1; SEQ ID NO 25950; 1481pp; English.
XX
CC The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
CC encoding a Propionibacterium acnes protein. The invention also relates to
CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
CC immunogenic fragments of P. acnes polypeptides. The invention
CC additionally encompasses expression vectors and host cells comprising a
CC polynucleotide of the invention; antibodies against polypeptides of the
CC invention; fusion proteins comprising a polypeptide of the invention; a
CC method for stimulating an immune response specific for a P. acnes
CC polypeptide and an isolated T cell population comprising P. acnes polypeptides,
CC via this method; a vaccine composition (comprising P. acnes polypeptides,
CC polynucleotides, antibodies, fusion proteins, T cell populations, or
CC antigen-presenting cells that express the polypeptide); a method and kit
CC for detecting or determining the presence or absence of P. acnes in a
CC patient; and a method for inhibiting the development of P. acnes in a
CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
CC proteins, T cell populations or antigen-presenting cells that express the
CC polypeptides are useful for diagnosing, preventing or treating acne
CC vulgaris, or for stimulating an immune response specific for a P. acnes
CC protein. The polynucleotides can also be used as probes or primers for
CC nucleic acid hybridisation. The vaccine composition is useful for the
CC stimulation of an immune response against P. acnes, or for treating acne,
CC and the kit is useful for performing a diagnostic assay. The present
CC sequence represents a polypeptide predicted to be encoded by an ORF (open
CC reading frame) contained within the P. acnes polynucleotides of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
CC which represent the human ORFX open reading frames 1 to 3161. The ORFX
CC sequences have activities such as: cytostatic; hepatotropic; vulnery;
CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
CC anticonvulsant; antiarthritic; immunosuppressant; immunostimulant;
CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive;
CC dermatological; immunosuppressive; antiinflammatory; antibacterial;
CC antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The
CC sequences can be used for determining the presence of or predisposition
CC to, or preventing or treating pathological conditions associated with an
CC ORFX-associated disorder. The nucleic acids can be used to express ORFX
CC proteins in gene therapy vectors. The proteins and nucleic acids may be
CC used to treat cancers, proliferative disorders, neurodegenerative
CC disorders, osteoarthritis, graft vs host disease, cardiovascular disease,
CC diabetes mellitus, hypertension, hypothyroidism, cholesterol ester
CC storage, systemic lupus erythematosus, severe combined immunodeficiency
CC (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
CC disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and
CC cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to
CC enhance coagulation; to inhibit thrombosis; and as a contraceptive

XX
PS Claim 20; SEQ ID NO 31832; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used

CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activities. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
CC amino acid sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in

XX New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 25; SEQ ID NO 59464; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid

CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at

PT New isolated mycobacterial peptide encoded by a gene that is induced or
PT up-regulated under high oxygen tension, useful for diagnosing, treating
PT or preventing a mycobacterial infection.

XX Claim 1; Page 269-270; 392pp; English.
PS
XX
CC The present invention describes an isolated mycobacterial peptide (I), or
CC its fragment, variant or derivative encoded by a gene whose expression is
CC induced or up-regulated during culture of a mycobacterium under
CC continuous culture conditions of a dissolved oxygen tension of at least
CC 30% air saturation measured at 37 plus degrees Celsius when compared with
CC a dissolved oxygen tension of up to 10% air saturation measured at 37
CC plus degrees Celsius. (I) has tuberculostatic activity and can be used in
CC vaccines. The mycobacterial peptide (I) or its fragment, variant or
CC derivative, inhibitor, antibody, attenuated mycobacterium, attenuated
CC microbial carrier, DNA sequence, DNA plasmid, RNA sequence, or RNA vector
CC from the present invention can be used for manufacturing a medicament for
CC treating or preventing a mycobacterial infection. The peptide or its
CC fragment, variant or derivative, the antibody, or a polynucleotide probe
CC comprising at least 8 nucleotides, where the probe binds to at least a
CC part of the gene, is useful for manufacturing a diagnostic reagent for
CC identifying a mycobacterial infection. The present sequence represents a
CC Mycobacterium tuberculosis mycobacterial antigen, which is used in the
CC exemplification of the present invention

XX

CC The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB9040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.
PS Claim 2; SEQ ID NO 6445; 14pp; English.
XX
CC The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant drought tolerance, for providing increased resistance to plant disease, for galactomannan production, for production of plant growth regulators, for improving plant heat tolerance, for improving plant tolerance to herbicides, for increasing the rate of homologous recombination in plants, for lignin production, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to pathogens or pests, for yield improvement by modification of photosynthesis, for modifying seed oil yield and/or content, for modifying seed protein yield and/or content, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improved plant growth and development under at least one stress condition. The polynucleotide may also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen

CC flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmotic and drought conditions, and improving plant tolerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

XX New human cell adhesion and extracellular matrix proteins and
PT polynucleotides, useful for diagnosing, preventing or treating diseases
PT or conditions associated with aberrant protein expression, e.g. cancer,
PT AIDS or stroke.
XX
PS Claim 1; SEQ ID NO 29; 308pp; English.
XX
CC The invention relates to a novel isolated human cell adhesion and
CC extracellular matrix (CADECM) polypeptide. The polypeptide of the
CC invention demonstrates cytostatic, antiarteriosclerotic, anti-HIV,
CC anti-allergic, cerebroprotective, antiparkinsonian, anticonvulsant,
CC nootropic, neuroprotective, antiinflammatory, ophthalmological,
CC antithyroid, antiarthritic, antiparasitic, anorectic, cardiant, hypotensive,
CC antiinfertility and hepatotropic activities. The polypeptide may be
CC useful in diagnosing, preventing or treating diseases or conditions such
CC as autoimmune or inflammatory disorders including AIDS, allergies, atopic
CC dermatitis, arthritis or thyroiditis, infections particularly bacterial,
CC viral, parasitic, protozoal or fungal, metabolic disorders such as
CC obesity, reproductive disorders e.g. infertility, neurological disorders
CC including Parkinson's disease, Alzheimer's disease, stroke or epilepsy,
CC cardiovascular disorders e.g. myocardial infarction or hypertension, eye
CC disorders or cell proliferative diseases including cancer.
CC atherosclerosis and hepatitis. The current sequence is that of the human
CC CADECM protein of the invention.

XX
PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 4111; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cyostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC protein of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
CC AAH52093 to AAH52303 encode the human secreted proteins given in AAG81242
CC to AAG81453. The secreted proteins can be used for directing the

CC secretion of proteins of interest from a host cell including bacteria,
CC fungal cells, and cultured higher eukaryotic cells. The present invention
CC also describes fusion proteins, where a secreted protein of the invention
CC is operably linked via a peptide bond or peptide linker to a second
CC protein selected from the group consisting of maltose binding protein, an
CC immunoglobulin constant region, a polyhistidine tag and a peptide given
CC in AAG81453

CC -!- FUNCTION: Catalyzes the condensation of ATP and PRPP to form N'-
5'-phosphoribosyl-ATP (PR-ATP). Has a crucial role in the pathway
CC because the rate of histidine biosynthesis seems to be controlled
CC primarily by regulation of hisG enzymatic activity (By
CC similarity).
CC -!- CATALYTIC ACTIVITY: 1-(5-phospho-D-ribosyl)-ATP + diphosphate =
CC ATP + 5-phospho-alpha-D-ribose 1-diphosphate.
CC -!- COFACTOR: Magnesium (By similarity).
CC -!- ENZYME REGULATION: Feedback inhibited by histidine (By
CC similarity).
CC -!- PATHWAY: Amino-acid biosynthesis; L-histidine biosynthesis; L-
CC histidine from PRPP: step 1.
CC -!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
CC -!- SIMILARITY: Belongs to the ATP phosphoribosyltransferase family.
CC Long subfamily.

RT "Cloning and characterization of an albicidin resistance gene from
RT Klebsiella oxytoca.";
RL Mol. Microbiol. 2:443-454(1988).
CC -!- FUNCTION: Albicidin resistance protein binds to form a complex
CC without antibiotic activity but without catalyzing any further
CC chemical modifications to albicidin.
CC -!- SUBCELLULAR LOCATION: Periplasmic.
-----
```

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PS
XX This sequence represents a thrombopoietin (TPO) receptor (TR) binding
CC peptide of the invention. The peptide has: (i) a molecular weight below
CC 5000; and (ii) a binding affinity for TR, expressed as IC50, not over 10
CC mM. The peptides are used to treat conditions requiring a thrombopoietin
CC agonist, particularly haematological disorders or thrombocytopaenia,

CC especially resulting from chemotherapy, radiation therapy or bone marrow
CC transfusions. Also when labelled they may be used for diagnosis
CC (detecting TR on cells); for studying mechanisms of haematopoiesis; for
CC in vitro expansion of megakaryocytes and committed progenitor cells, and
CC for the development/identification of other TR agonists. The compounds
CC accelerate thrombocyte regeneration

XX Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
XX Claim 19; Page 208; 608pp; English.
PS
XX The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and

CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

DR
XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 43; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

DR
XX New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
PS Disclosure; SEQ ID NO 473; 97pp; English.
XX
CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/ or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,

CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

PT New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX
PS Claim 2; SEQ ID NO 473; 129pp; English.

XX
CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX
CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an osteopathic,
CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
CC immunomodulator, antiallergic, muscular-Gen, cytostatic,
CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or
CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
CC modulator or cytokine-agonist. The methods and compositions of the
CC present invention are useful for the diagnosis, prevention and/or

CC treatment of diseases or conditions associated with aberrant expression
CC or activity of the CH1 deleted mimetibody, such as a bone or joint,
CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
CC obstetric, haematologic, immunological, allergic, infectious,
CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
CC pediatric, psychiatric, renal or pulmonary disorders. The present
CC sequence is that of a peptide which may be used during the creation of a
CC mimetibody of the invention.

XX New antisense nucleic acids, useful for identifying proteins or screening
CC for homologous nucleic acids required for cellular proliferation to
CC isolate candidate molecules for rational drug discovery programs.
PS Claim 25; SEQ ID NO 64158; 1766pp; English.
XX The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway

CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX CC The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and lung cancer

XX PT New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

XX PS Claim 1; Page; 1017pp; English.

XX CC The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PS Claim 1; Page; 1017pp; English.

XX The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a

CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene

XX PT New tumor-associated antigenic target polypeptides and nucleic acids,
PT useful in preparing a medicament for treating or detecting a
PT proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT prostate cancer or tumor.

PS Claim 12; SEQ ID NO 4099; 7273pp; English.

XX The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT polypeptide of the invention

PT New PRO polynucleotides and polypeptides, useful in diagnosing
PT and treating an immune related disease, e.g. systemic lupus
PT erythematosus, rheumatoid arthritis, diabetes mellitus or asthma and in
PT stimulating an immune response.

XX Claim 1; SEQ ID NO 699; 3009pp; English.

PS The present invention describes an isolated PRO nucleic acid (I). Also
XX described: (1) a vector comprising (I); (2) a host cell comprising the
CC vector of (1); (3) a process for producing a PRO polypeptides; (4) an
CC isolated PRO polypeptide; (5) a chimeric molecule comprising the
CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an
CC antibody which specifically binds to a polypeptide of (4); (7) a
CC composition of matter comprising a polypeptide of (4), an agonist or
CC antagonist of the polypeptide or an antibody that binds to the
CC polypeptide in combination with a carrier; (8) an article of manufacture
CC comprising a container, a label on the container and a composition of
CC matter of (7); (9) a method of treating an immune related disease in a
CC mammal; (10) a method for determining the presence of a PRO polypeptide
CC in a sample suspected of having the polypeptide; (11) a method of
CC diagnosing an immune related disease or an inflammatory immune response
CC in mammal; (12) a method of identifying a compound that inhibits or
CC mimics the activity of or expression of a gene encoding a PRO polypeptide
CC ; and (13) a method of stimulating the immune response in a mammal. The
CC PRO sequences have antiallergic, antianaemic, antiarthritic,
CC antiasthmatic, antidiabetic, antiinflammatory, antipsoriatic,
CC antirheumatic, antithyroid, CNS, dermatological, gastrointestinal,
CC haemostatic, hepatotropic, immunostimulant, immunosuppressive, muscular,
CC nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and
CC virucide activities, and can be used in gene therapy. The nucleic acid
CC (I) and the encoded polypeptides, compositions, kits and methods are

CC useful in diagnosing and treating an immune related disease and in
CC stimulating an immune response. The present sequence represents a human
CC PRO protein from the present invention.

XX Biomarkers useful for predicting or determining the response of a mammal
PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.
XX
PS Claim 5; SEQ ID NO 126; 141pp; English.
XX
XX This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether
CC patient would be susceptible or resistant to treatment by an agent
CC modulating cdk activity. The invention also describes a method for
CC utilizing individualized genetic profiles for treating diseases and
CC disorders based on patient's response and molecular level, specialized
CC microarrays comprising the biomarkers described, antibodies directed
CC against the biomarkers and a cell culture model to identify biomarkers.
CC The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC tartaric acid salt. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC sequence represents a biomarker used in the method of the invention.

CC AAC77607 to AAC78448 encode the human cancer associated proteins given in
CC AAB43398 to AAB44239. The proteins can have activities based on the
CC tissues and cells the genes are expressed in. Example of activities
CC include: cytostatic; proliferative; vulnery; immunomodulator;
CC antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
CC antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral;
CC dermatological; neuroprotective; cardiant; thrombolytic; coagulant;
CC nootropic; vasotropic; antipsoriatic and antiangiogenic. The
CC polynucleotides and polypeptides can be used for preventing, treating or
CC ameliorating medical conditions and diagnosing pathological conditions.
CC Polynucleotides, polypeptides, antibodies, agonists and antagonists from
CC the present invention may be used to treat immune disorders by activating
CC or inhibiting the proliferation, differentiation or mobilisation of
CC immune cells, to treat disorders of haematopoietic cells, autoimmune
CC disorders, allergic reactions, graft versus host disease and organ
CC rejection, modulate haemostatic or thrombolytic activity, modulate
CC inflammation, cancers, cardiovascular disorders, neurological disease and
CC bacterial or viral infections. The peptides, nucleotides, antibodies,
CC agonists and antagonists may be also be used in drug screens. AAC78449 to
CC AAC78457 and AAB44240 represent sequences used in the exemplification of
CC the present invention

PT New recombinant DNA constructs useful in the field of biochemistry and
PT genetics, and in particular for producing transgenic plants with improved
PT biological characteristics.
XX
PS Claim 2; SEQ ID NO 6570; 14pp; English.
XX
CC The invention relates a recombinant DNA construct comprising a
CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
CC Arabidopsis, wheat and rape but the specification does not indicate which
CC sequences is derived from which organism. Also included is a method of
CC producing a plant having an improved property, comprising transforming a
CC plant with a recombinant DNA construct comprising a promoter region
CC functional in a plant cell operably joined to a polynucleotide encoding a
CC polypeptide associated with the property, and growing the transformed
CC plant. The property is selected from improving plant cold tolerance, for
CC manipulating growth rate in plant cells by modification of the cell cycle
CC pathway, for improving plant drought tolerance, for providing increased
CC resistance to plant disease, for galactomannan production, for production
CC of plant growth regulators, for improving plant heat tolerance, for
CC improving plant tolerance to herbicides, for increasing the rate of
CC homologous recombination in plants, for lignin production, for improving
CC plant tolerance to extreme osmotic conditions, for improving plant
CC tolerance to pathogens or pests, for yield improvement by modification of
CC photosynthesis, for modifying seed oil yield and/or content, for
CC modifying seed protein yield and/or content, for yield improvement by
CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake
CC and for yield improvement by providing improved plant growth and
CC development under at least one stress condition. The polynucleotide may
CC also encode a plant transcription factor. The methods and compositions of
CC the present invention are useful in the field of biochemistry and
CC genetics, in particular for producing transgenic plants with improved
CC biological characteristics such as increased yield, improved nitrogen
CC flow, increasing plant tolerance to cold or heat, improving plant
CC tolerance to extreme osmotic and drought conditions, and improving plant
CC tolerance to plant pests or pathogens. They can also be used in physical
CC arrays of molecules, plant breeding markers, computer-based storage and
CC analysis systems. The present sequence is one of the 5544 plant protein
CC sequences of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

XX PT Nucleic acids encoding a range of human polypeptides, useful in genetic
PT vaccination, testing and therapy.

XX PS Claim 20; Page 278; 765pp; English.

XX CC The invention relates to novel human secreted polypeptides. The
CC polypeptides and antibodies to the polypeptides are useful for
CC determining the presence of or predisposition to a disease associated
CC with altered levels of polypeptide. The polypeptides are also useful for
CC identifying agents (agonists and antagonists) that bind to them. Cells
CC expressing the proteins are useful for identifying a therapeutic agent
CC for use in treatment of a pathology related to aberrant expression or
CC physiological interactions of the polypeptide. Vectors comprising the
CC nucleic acids encoding the polypeptides and cells genetically engineered
CC to express them are also useful for producing the proteins. The proteins
CC are useful in genetic vaccination, testing and therapy, and can be used
CC as nutritional supplements. They may be used to increase stem cell
CC proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon
CC and/or nerve tissue growth or regeneration; immune suppression and/or
CC stimulation; as anti-inflammatory agents; and in treatment of leukaemias.

PT New isolated nucleic acid representing a synthetic BAX-gene, useful as
PT medicament for treating, preventing and/or alleviating yeast or fungal
PT infections or proliferative disorders, or for preventing apoptosis in
PT certain diseases.
XX
PS Claim 36; Fig 1; 344pp; English.
XX
CC This invention describes a novel nucleic acid representing a synthetic
CC Bax gene. The Bax gene of the invention is useful for identifying Bax-
CC resistant yeast or fungi, identifying, or obtaining and identifying
CC Candida spp. sequences that are differentially expressed in a pathway
CC eventually leading to programmed cell death or identifying inhibitors or
CC inhibitor sequences of Bax-induced cell death. The products of the
CC invention have cytostatic, fungicide; immunosuppressive, virucide and
CC vasotropic activity and can be used in vaccines or for gene therapy. The
CC isolated nucleic acids, polypeptides, pharmaceutical compositions,
CC antisense molecules and antibodies are useful as medicaments or in
CC preparing a medicament for treating, preventing and/or alleviating
CC diseases associated with yeast or fungi or proliferative disorders, such
CC as cancer, or for preventing apoptosis in certain diseases. The compounds
CC or polypeptides , or the genetically modified organism are useful for
CC preparing a medicament for modifying the endogenous flora of humans and
CC other mammals. The vaccine is useful for immunising against yeast or
CC fungal infections. Apoptosis-related diseases include autoimmune disease,
CC ischaemia, diseases related with viral infections or neurodegenerations.
CC This sequence represents a polypeptide associated with the Bax gene
CC described in the disclosure of the invention

XX PT New proteins and protein complexes from eukaryotes, useful as targets in
PT drug screening, or in diagnosing or screening for the presence of a
PT disease or disorder, or a predisposition for developing a disease or
PT disorder in a subject.

XX PS Disclosure; SEQ ID NO 2219; 13pp; English.

XX CC The invention relates to novel protein complexes comprising a first and a
XX second protein, or its derivative, fragment, homologue or variant. The
XX proteins are selected from given protein complexes, which are not defined
XX in the specification. The variants are encoded by nucleic acids that
XX hybridize to the nucleic acids encoding the proteins under low stringency
XX conditions. The protein complexes are useful as targets for an active
XX agent of a pharmaceutical. These protein complexes are particularly
XX useful as drugs targets for the treatment or preventing of a disease or
XX disorder. The complexes and methods above are useful in diagnosing or
XX screening for the presence of a disease or disorder in a subject. These are also useful
XX for developing a disease or disorder in a subject. These are also useful
XX in screening for a drug for treatment or prevention of a disease or
XX disorder. The molecule that modulates the amount, activity or protein
XX components of the complex is useful for the manufacture of a medicament
XX for the treatment or prevention of a disease or disorder. This sequence
XX corresponds to a protein of the invention. (Note: the sequence data for
XX this patent did not form part of the printed specification but was
XX obtained from the EPO in electronic format).

XX PT Propionibacterium acnes polypeptides and nucleic acids useful for
PT vaccinating against and diagnosing infections, especially useful for
PT treating acne vulgaris.

XX PS Example 1; SEQ ID NO 28786; 1069pp; English.

XX CC Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
XX polypeptides. The proteins and their associated DNA sequences are used in
XX the treatment, prevention and diagnosis of medical conditions caused by
XX P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
XX pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
XX P. acnes is also involved in infections of bone, joints and the central
XX nervous system, however it is particularly involved in the inflammatory
XX lesions associated with acne vulgaris. A method for detecting the
XX presence or absence of P. acnes in a patient comprises contacting a
XX sample with a binding agent that binds to the proteins of the invention
XX and determining the amount of bound protein in the sample. The
XX polypeptides may be used as antigens in the production of antibodies
XX specific for P. acnes proteins. These antibodies can be used to
XX downregulate expression and activity of P. acnes polypeptides and
XX therefore treat P. acnes infections. The antibodies may also be used as
XX diagnostic agents for determining P. acnes presence, for example, by
XX enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.

PS Claim 20; SEQ ID NO 58995; 103pp; English.

XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological actions. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic
CC amino acid sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at

XX PT New molecular complex of BRCA1 protein and acetyl coenzyme A-carboxylase alpha, useful in screening agents suitable for treatment, prevention or diagnosis of cancer.

XX PS Disclosure; Page 55-62; 62pp; French.

XX CC The present sequence represents human acetyl coenzyme A-carboxylase alpha (ACC-alpha). The ACC-alpha protein was used in the course of the invention. The specification describes a molecular complex comprising a polypeptide having amino acids 1640-1663 of the human BRCA1 protein (or similar sequence from some other animal species), and a polypeptide that is a part of the acetyl coenzyme A-carboxylase alpha (ACC-alpha) protein able to bind the BRCA1 protein. The complex is implicated in predisposition to cancer of breast and ovary. It is used to screen for compounds that modulate interaction between BRCA1 and ACC-alpha, which are potentially useful for treatment, prevention and diagnosis of cancer, and to identify endogenous ligands. Modulated formation of the complex can be used for diagnosis of cancer. Antibodies directed against specific parts of human ACC-alpha are useful for localization of the complex in cells

XX
CC The invention relates to multiprotein complexes from eukaryotes. Proteins
CC of the invention and DNA sequences encoding them are given in records
CC ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are
CC obtainable by using a protein as a bait and isolating the set of proteins
CC which is attached thereto from cells. Such protein complexes may comprise
CC up to 30 distinct proteins. Protein complexes of the invention are useful
CC for diagnosing a disease or disorder, or as a target for an active agent
CC of a pharmaceutical, preferably a drug target in the treatment or
CC prevention of a disease or disorder. Note: The sequence data for this
CC patent is not represented in the printed specification, but is based on
CC sequence information supplied by the European Patent Office. The complete
CC document is available on CD-ROM

PT New proteins and protein complexes from eukaryotes, useful as targets in
PT drug screening, or in diagnosing or screening for the presence of a
PT disease or disorder, or a predisposition for developing a disease or
PT disorder in a subject.
XX
PS Disclosure; SEQ ID NO 1067; 13pp; English.
XX

CC The invention relates to novel protein complexes comprising a first and a
CC second protein, or its derivative, fragment, homologue or variant. The
CC proteins are selected from given protein complexes, which are not defined
CC in the specification. The variants are encoded by nucleic acids that
CC hybridize to the nucleic acids encoding the proteins under low stringency
CC conditions. The protein complexes are useful as targets for an active
CC agent of a pharmaceutical. These protein complexes are particularly
CC useful as drugs targets for the treatment or preventing of a disease or
CC disorder. The complexes and methods above are useful in diagnosing or
CC screening for the presence of a disease or disorder or a predisposition
CC for developing a disease or disorder in a subject. These are also useful
CC in screening for a drug for treatment or prevention of a disease or
CC disorder. The molecule that modulates the amount, activity or protein
CC components of the complex is useful for the manufacture of a medicament
CC for the treatment or prevention of a disease or disorder. This sequence
CC corresponds to a protein of the invention. (Note: the sequence data for
CC this patent did not form part of the printed specification but was
CC obtained from the EPO in electronic format).

PT New Lepidoptera calcium channel subunits, useful as active agents in
PT agrochemical, veterinary or pharmaceutical fields, e.g. as insecticide,
PT acaricide, or for treating infection, damage or discomfort caused by
PT parasitic organisms.

XX Claim 1; SEQ ID NO 14; 144pp; English.

PS This invention relates to novel isolated nucleic acids from Lepidoptera
XX that each encode a voltage-gated calcium channel subunit protein.
CC Specifically, it refers to methods and screening assays to identify
CC compounds that can target and modulate these channels and as such that
CC have potential activity as pesticides. Accordingly, the present invention
CC provides active agents that have applications in the agrochemical,
CC veterinary and pharmaceutical fields, and can be used as an insecticide,
CC nematocide, molluscide, helminthicide, acaricide or other types of
CC pesticides or biocides. In addition, they can be applied systemically (as
CC additives) to the soil or habitat of the organism to act as crop
CC protection agents or as a pesticide for household use to prevent or treat
CC infection and/ or discomfort caused by parasitic organisms such as
CC parasitic arthropods, nematodes or helminths. This polypeptide sequence
CC is a tobacco budworm voltage-gated calcium channel protein subunit of the
CC invention.

XX
CC The present invention provides a number of nucleotide and protein
CC sequences from the Corynebacterium bacterium Corynebacterium glutamicum. These
CC are useful for identifying the mutation point of a gene derived from a
CC mutant of corynebacterium bacterium, measuring expression amount and analysing
CC the expression profile or expression pattern of a gene derived from
CC Corynebacterium bacterium, and identifying a homologue of a gene derived from
CC Corynebacterium bacterium. Corynebacterium bacteria are useful for producing amino
CC acids, nucleic acids, vitamins, saccharides and organic acids,
CC particularly L-lysine. The present sequence is a protein described in the
CC exemplification of the invention. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from the European Patent Office

C;Date: 23-Apr-1999 #sequence_revision 23-Apr-1999 #text_change 09-Jul-2004
C;Accession: T03944
R;Cordts, S.; Loerz, H.; Dresselhaus, T.
submitted to the EMBL Data Library, September 1996
A;Description: A transcript encoding the large subunit acidic ribosomal protein P0 is s
A;Reference number: Z15151
A;Accession: T03944
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-319 <COR>
A;Cross-references: UNIPROT:Q24573; UNIPARC:UPI000016E078; EMBL:Y07959; PIDN:CAA69256.1
A;Experimental source: note inbred line A188
C;Genetics:
A;Note: RP-P0
C;Superfamily: rat acidic ribosomal protein P0
C;Keywords: protein biosynthesis; ribosome; RNA binding

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -!- FUNCTION: Catalyzes the hydrolysis of GTP bound to the 40S
CC ribosomal initiation complex (40S.mRNA.Met-tRNA[^{Phe}].eIF-2.GTP) with
CC the subsequent joining of a 60S ribosomal subunit resulting in the
CC release of eIF-2 and the guanine nucleotide. The subsequent
CC joining of a 60S ribosomal subunit results in the formation of a
CC functional 80S initiation complex (80S.mRNA.Met-tRNA[^{Phe}]).
CC -!- SIMILARITY: Belongs to the eIF-2-beta/eIF-5 family.
CC -----

CC -!- FUNCTION: Required for neural tube formation. Essential for normal
CC heart development and function. Acts as a transcriptional
CC repressor of ANF by binding to both GATA4 and NKX2-5 and
CC repressing their transcriptional activator activities.
CC Participates in the negative regulation of cell proliferation
CC signaling.
CC -!- SUBUNIT: Interacts with the N-terminal region of GATA4 and the C-
CC terminal region of the NKX2-5 homeobox and represses their ability
CC to activate transcription of ANF.
CC -!- INTERACTION:
CC Q08369:Gata4; NbExp=2; IntAct=EBI-493592, EBI-297008;
CC P42582:Nkx2-5; NbExp=2; IntAct=EBI-493592, EBI-297021;
CC -!- SUBCELLULAR LOCATION: Nuclear.
CC -!- TISSUE SPECIFICITY: Widely expressed in embryos. In adults,
CC expressed at high levels in heart, skeletal muscle, brain and
CC thymus.
CC -!- SIMILARITY: Contains 1 ARID domain.
CC -!- SIMILARITY: Contains 1 JmjC domain.
CC -!- SIMILARITY: Contains 1 JmjN domain.
